Use Information

Sharpen may be used for harvest aid/desiccation in field corn to desiccate the crop and weeds and to facilitate crop harvest.

Application Information

Application Rates and Timings

Uniformly apply **Sharpen** at 1.0 to 2.0 fl ozs/A as a broadcast spray over the top of field corn that have reached physiological maturity or according to Extension Service recommendations in the use area. Allow up to 10 days for optimum desiccation effect depending on environmental conditions.

Thorough spray coverage and methylated seed oil (MSO) plus ammonium-based adjuvant system (refer to **Additives** section on the product container label for details) are required for optimum desiccation activity and weed control.

Make ground application at a minimum spray volume of 10 gallons per acre, or aerial application at a minimum spray volume of 5 gallons per acre.

Sharpen may be applied in a single application or sequential applications.

Crop-specific Restrictions

- **DO NOT** apply more than 2.0 fl ozs/A of **Sharpen® herbicide** (0.044 lb a.i./A of saflufenacil) in a single application or as a maximum cumulative amount from sequential applications in field corn per cropping season for desiccation uses.
- **Preharvest Interval (PHI)** – 3 days
- Desiccation-treated field corn stover (stalks) may be grazed or fed to livestock.
