RATE CHART BASED ON TREE HEIGHT

Field Immature Trees : Soil drench rates

Tree Height	Fluid ounces / Tree	Trees / fluid ounce	Trees / 14 fluid ounces
2 to 4 ft	0.050 fluid ounce	20 trees	280 trees
4 to 6 ft	0.100 fluid ounce	10 trees	140 trees

Notes and Restrictions

Pre-Harvest Interval (PHI): **0 day**

Maximum ADMIRE PRO allowed per season: **14.0 fluid ounces/Acre** (0.5 lb AI/Acre)

Applications

Apply specified dosage in one of the following methods:

1. Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler or equivalent equipment. For optimum results, apply to newly planted trees or those previously trained to drip, trickle or micro-sprinkler irrigation. Soil should be lightly pre-wetted to break soil surface tension prior to applications of ADMIRE PRO. Chemigation application can be made separate to normal irrigation but followed by 10 to 20 minutes of additional watering to move ADMIRE PRO into root-zone. Allow 24 hours before initiating subsequent irrigations;
2. Soil surface band spray on both sides of the tree. Bands should overlap at the tree base to create a continuous band within the drip-line area of the tree, to be followed immediately with light sprinkler irrigation sufficient to move the product into the upper portion of the root-zone. This method is suitable for very coarse soils with 0.75% organic matter or less;
3. Drench to base of tree not exceeding 32 oz in total solution per tree immediately around trunk of tree and extending outward covering the entire fibrous root system of the tree.
