

TECHNICAL INFORMATION BULLETIN
FOR THE USE OF Venerate XC® BIOINSECTICIDE
Apple Maggot (*Rhagoletis pomonella*) on Apples

FIFRA Section 2(ee) Recommendation

This recommendation is made as permitted by Section 2(ee) of FIFRA, as amended, and has not been submitted to or approved by the U. S. Environmental Protection Agency.

FOR USE IN ALL STATES WHERE CROP AND PEST(S) EXIST AND WHERE 2(Ee) RECOMMENDATIONS ARE RECOGNIZED.

Venerate XC®
EPA Reg. No. 84059-14

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Crop	Target Insect	Application Method	Product Use Rate per Application	Application Instructions
Apple	Apple maggot	Foliar (Ground) application	2 quarts per acre	Apply Venerate XC by ground application using nozzle and pressure configurations to provide complete coverage of fruit. Begin applications when adult apple maggots are identified in the growing region and continue applications on a 7-day interval until harvest or until fly activity is no longer evident. Water volume should be a minimum of 50 gallons per acre for high density plantings up to 100 gallons per acre for semi-dwarf orchards.
Venerate XC® has a pre-harvest interval (PHI) of 0 days . Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours .				

All applicable directions, restrictions and precautions on the EPA-registered label are to be followed.

This FIFRA Section 2(ee) recommendation contains new or additional directions for use of this product, which may not appear on the package label. Read and carefully observe the cautionary statements plus all the other information appearing on the product label.

This recommendation must be in the possession of the user at the time of pesticide application.
