

FIFRA Section 24 (C)  
**Special Local Need**

**CHINOOK®**

EPA Reg. No. 70506-321

EPA SLN No. NY-180007

**FIFRA Sec. 24(c) SPECIAL LOCAL NEED LABEL FOR DISTRIBUTION AND USE ONLY IN  
THE STATE OF NEW YORK**

**ADDITIONAL DIRECTIONS FOR PLANTS CONTROLLED AND CHINOOK DOSAGE  
RATES FOR SURFACE OR INJECTED APPLICATION IN QUIESCENT OR SLOW-MOVING  
WATER**

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label and the federally approved label must be in the possession of the user at the time of pesticide application.

Read and follow all applicable directions, restrictions and precautions on the EPA-registered label.

When referring to the table for PLANTS CONTROLLED AND CHINOOK DOSAGE RATES FOR SURFACE OR INJECTED APPLICATION IN QUIESCENT OR SLOW-MOVING WATER on the EPA registered label, if there is uncertainty in the appropriate application rate, the user should consult a UPL NA Inc. representative to determine when it is appropriate to use the “entire pond/lake, large area treatment” or the “spot or marginal treatment” application rate.

**Note:** In New York State documentation of the application rate selection process must be supplied to the New York State Department of Environmental Conservation upon request, as a component of the aquatic pesticide permitting process.

**New York State Specific Use Restrictions:**

1. Day After Application Swimming Restriction:  
**Note:** In order to allow for sufficient mixing of this product after application to bodies of water, swimming in the treated area is restricted until the day after application.
2. Concentration of endothall acid and 2,4-D in a public drinking water source must not exceed 0.05 ppm (50 ppb) in New York State. Applicators must consider the unique characteristics of the treated waters to assure that the endothall acid and 2,4-D concentration does not exceed 50 ppb at the public water intake.  
**Note:** There are no chemical specific New York State drinking water standards for endothall acid or 2,4-D. Based on its chemical structure, these chemicals fall under the 50 micrograms per liter New York State drinking water standard for “unspecified organic contaminants” (10NYCRR Part 5, Public Water Systems).
