

FIFRA Section 24(c)  
**SPECIAL LOCAL NEED LABEL**

**FOR DISTRIBUTION AND USE ONLY IN THE STATE OF OHIO**

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Follow all applicable directions, restrictions and precautions on the EPA registered label. This label and the container label must be in the possession of the user at the time of pesticide application.

**TRIPZIN® ZC Herbicide**

(EPA Reg. No. 70506-330)

EPA SLN No. OH-220002

**For Use in Established Tomato, Post-Directed and Row Middle Applications**

**TRIPZIN ZC may be applied post-directed and to row middles in established tomatoes**

| <b>Soil Texture</b>  | <b>TRIPZIN ZC Rate (Pt./A)</b> |
|--|--------------------------------|
| <b>COARSE</b> (Loamy Sand, sandy loam)                             | 1.75 – 2.5                     |
| <b>MEDIUM</b> (Loam, silt loam, silt, sandy clay, sandy clay loam) | 2.5 - 3.0                      |
| <b>FINE</b> (Silty clay, silty clay loam, clay, clay loam)         | 3.0 – 3.6                      |

For control of carpetweed, lambsquarters, black nightshade, hairy nightshade, pigweeds, purslane and smartweeds; marestalk (horseweed suppression) apply TRIPZIN ZC in a band to the previously untreated row middles between the transplanted tomatoes when weeds are less than 1 inch tall. One or more applications may be made per season, not to exceed 3.6 pts per acre per season. Apply TRIPZIN ZC to tomatoes that are not in transplant shock. The tomato plants must be at least 4 inches tall or 5 to 6 leaf stage at the time of application. Avoid contacting tomato foliage with spray. Apply specified dosage in 20 or more gallons of water per acre as a directed spray.

**Precautions**

- TRIPZIN ZC may damage transplants that have been weakened by any cause. To prevent damage, plant only healthy transplants.
- For row middle applications where tomatoes are grown on sandy soils and where high soil moisture conditions can exist (e.g., low binding and high evaporation conditions) there is a potential for crop injury). The risk of injury can be reduced by:
  - Avoiding contact of tomato foliage with TRIPZIN ZC spray solution.
  - Minimizing the application of TRIPZIN ZC onto the plastic of the bed.
  - Applying TRIPZIN ZC as a post-directed application or shielded sprayer application.
  - Avoiding application of TRIPZIN ZC on windy days when conditions exist for spray drift.
  - Any combination of the above.

**Restrictions**

- Do not apply more than 3.6 pts per acre per season.
- Do not apply within 21 days before harvest of tomatoes.
- Do not apply until tomatoes have recovered from transplant shock.
- Do not apply within 3 days after periods of cool, wet or cloudy weather, or crop injury will occur.
- Do not use hot caps on tomatoes within 7 days before or at any time after application.
- Do not apply by air.
- Do not apply any earlier than 14 days between applications, or severe crop injury may occur.
- Do not apply to varieties or cultivars with unknown tolerance to metribuzin or pendimethalin.
