GENERAL INFORMATION

BenVireo TerraLux 10-0-0 contains ammoniacal nitrogen distilled from livestock manure. A portion of this ammoniacal nitrogen is converted to nitrate utilizing naturally occurring bacteria in a proprietary digestion process. This product is designed to prevent or correct nitrogen deficiencies in a wide range of agronomic and ornamental plants. It should be used as part of a comprehensive Total Nutrition System® for optimizing soil/nutrient conditions for plant growth, development, yield and quality.

DIRECTIONS FOR USE

BenVireo TerraLux 10-0-0 can be used on field, specialty, and horticulture crops, including turf and ornamentals. Rates of application and timing of treatment should be based on crop nutrient demand, prevailing environmental conditions, plant tissue analysis data, or other information that indicates a need for supplemental nitrogen. Consult your Wilbur Ellis representative for rates specific to your crops and conditions.

FOLIAR APPLICATIONS: Apply 0.5 to 2 gallons per acre by air, ground or sprinkler. Dilution of 20 gallons of water to 1 gallon of product is recommended. Maintain agitation to provide uniform distribution within the spray tank. Thorough and even coverage is essential for maximum nutrient uptake and crop safety. Do not apply when plants are under excessive heat or moisture stress.

SOIL APPLICATIONS: Apply 0.5 to 40 gallons per acre as broadcast, band, side-dress, or injected through irrigation systems (sprinkler, drip, or center pivot). Maintain agitation to provide uniform distribution within the spray tank. If applied to the surface, incorporation within 3 days is recommended.

COMPATIBILITY: BenVireo TerraLux 10-0-0 is compatible with many co-applied nutrient sources as well as plant protection products. Always jar test new combinations for compatibility prior to field mixing.

KEEP OUT OF REACH OF CHILDREN
