

Product Bulletin

EPA Reg. No. 34704-900

SUPPLEMENTAL LABELING

For use on Wheat and Barley

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read this label and the product package label before using this product. This Supplemental Label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions in the registered product label for Monsoon.

DIRECTIONS FOR USE

| CROP | DISEASE | RATE OF MONSOON |
|---|--|--------------------|
| Barley | Rusts (<i>Puccinia</i> spp.) | 4 fl. oz. per acre |
| | Head blight (<i>Fusarium</i> spp.) — Suppression | |
| APPLICATION INSTRUCTIONS: Apply MONSOON in a minimum of 10 gallons of spray solution per acre by ground or in a minimum of 5 gallons of spray solution per acre by air. A maximum of 4 fl. Oz. of MONSOON may be applied per acre per crop season. Do not apply within 30 days of harvest. Straw cut after harvest may be fed or used for bedding. Grazing livestock or feeding of green forage is permitted 6 or more days after the last application of MONSOON. Barley fields should be observed closely for early disease symptoms particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development. APPLICATION TIMING DIRECTIONS: Rusts: Apply MONSOON at the earliest sign of rust pustules on foliage. Fusarium head blight: Optimal timing of MONSOON for Fusarium head blight suppression is when main stem heads have fully emerged (Feekes 10.5) on 50% of the plants. | | |
| General Comments: For optimum disease control, the lowest specified rate of a spray surfactant should be tank-mixed with MONSOON. MONSOON must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, MONSOON will be resistant to weathering. MONSOON is a demethylation inhibitor (DMI) fungicide (Group 3). | | |

| CROP | DISEASE | RATE OF MONSOON |
|---|---|--------------------|
| Wheat | Rusts leaf, stem, and stripe (<i>Puccinia</i> spp.) Head blight or scab (<i>Fusarium</i> spp.) - Suppression | 4 fl. Oz. per acre |
| | APPLICATION INSTRUCTIONS: Wheat fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development. A maximum of 4 fl. Oz. of MONSOON may be applied per acre per crop season. Do not apply within 30 days of harvest. Straw may be fed or used for bedding. Do not allow livestock to graze or feed green forage to livestock prior to 6 days after treatment with MONSOON. Apply MONSOON in a minimum of 10 gallons of spray solution per acre by ground, or in a minimum of 5 gallons of spray solution per acre by air. APPLICATION TIMING DIRECTIONS: Rusts: Apply MONSOON at the earliest sign of rust pustules on foliage. Fusarium head blight: Optimal timing of MONSOON for Fusarium head blight suppression is the beginning of flowering on main stem heads (Feekes 10.51). | |
| General Comments: For optimum disease control, the lowest specified rate of a spray surfactant should be tank-mixed with MONSOON. MONSOON must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, MONSOON will be resistant to weathering. MONSOON is a demethylation inhibitor (DMI) fungicide (Group 3). | | |
