For END OF SEASON CROP
TERMINATION TREATMENT OF
STRAWBERRIES

FIFRA 2ee RECOMMENDATION

K-Pam® HL™

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF CALIFORNIA.

EPA Reg. No. 5481-483

END OF SEASON CROP TERMINATION TREATMENT OF STRAWBERRIES

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

THIS BULLETIN MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF APPLICATION.

Before applying K-Pam®HL please read the complete label affixed to the product container. All applicable directions, restrictions and precautions on the EPA-registered label are to be followed. Use of K-Pam®HL according to this supplemental labeling is subject to the use precautions and limitations imposed by the label on the container.

IMPORTANT: Read the entire Directions for Use and the Limited Warranty and Disclaimer on the EPA-registered K-Pam®HL label before using this product.

Use Information

End of Season Crop Termination with Drip (Trickle) Chemigation of Beds with Existing Tarp/Plastic Mulch

Follow the instructions listed in the K-Pam® HL Section 3 label for preparation and application conditions for pre-plant drip chemigation, with the exception of those instructions for soil preparation which are not applicable for this treatment. Use the following additional steps:

- Use existing drip or trickle tape in the bed.

- Ensure that all drip (trickle) tape is functional with all major leaks repaired.
- Apply K-Pam® HL in beds that are already covered with plastic (with or without plant holes) and have a drip tape buried at a depth of >1 inch.
- Apply K-Pam® HL soon after the last harvest when the plants are still actively growing.
- Apply K-Pam® HL at 36 - 47 gallons/acre at a flow rate that allows good lateral movement of water in the bed.
- Contact the local extension specialist or visit <http://ipm.ucanr.edu/PMG/r734900211.html> for more information about flow rates that provide good fumigant distribution in soil on strawberries.
- Use the maximum application rate for fields with hard-to-control weeds and pathogens such as nutsedge (*Cyperus* sp), Fusarium wilt (*Fusarium oxysporum* f. sp. *fragariae*) and Charcoal rot (*Macrophomina phaseolina*)
- K-Pam® HL application rate per treated acre is not to exceed 62 gallons which corresponds to a broadcast equivalent rate of 47 gal/acre.
- Dispose of all crop and / or plant residues following treatment by removal, tillage or other appropriate means.

Restrictions

<p>The terminated crop must not be used for any food or feed purposes after the product has been applied.</p>
