

## SUPPLEMENTAL LABEL

Drexel®

*Imitator® Aquatic*

Herbicide

(EPA Reg. No. 19713-623)

### KEEP OUT OF REACH OF CHILDREN CAUTION

#### FOR CONTROL OF CORDGRASS IN ESTUARIES IN WASHINGTON STATE ONLY

#### DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the entire Drexel Imitator Aquatic Herbicide label before proceeding with the use directions contained in this supplemental labeling.
- Follow all applicable directions, restrictions, Worker Protection Standard (WPS) requirements, and precautions on the registered label for EPA Reg. No. 19713-623.

**Only certified applicators or persons under the direct supervision of a certified applicator may use or apply this product to control Cordgrass in Washington State under the conditions described. All applicators must comply with the NPDES permit issued to the WSDA.**

The presence of debris and silt on the surface of Cordgrass plants will reduce product performance. It may be necessary to wash targeted plants prior to application to improve herbicide uptake. Where Cordgrass has been cut or mowed prior to application, allow significant regrowth before application to ensure adequate interception and uptake of the herbicide solution.

Prior to application, survey the area to be treated to determine if shellfish beds exist within the intended treatment area. Wait either until shellfish have been harvested before application is made or do not harvest shellfish for 14 days following treatment.

When making broadcast applications by ground or by air or when using handheld, backpack or high volume equipment, use crop oil concentrate, modified vegetable oil concentrate or nonionic surfactant at the labeled rates. If needed, other spray adjuvants including antifoaming agent, drift control agents, and water conditioning agents may be used. Only spray adjuvants that are registered for aquatic use by WSDA and are authorized under the NPDES permit may be used.

Refer to the "USE INFORMATION", "MIXING AND APPLICATION INSTRUCTIONS", and "APPLICATION EQUIPMENT AND TECHNIQUES" sections of Drexel Imitator Aquatic Herbicide label for use of this product.

## Application

Under ideal application conditions, that is, when silt and debris are not present on plant surfaces, good spray coverage is achievable, target plants are actively growing, and specified rates and application volumes are used, allow at least 4 hours drying time before plants are covered by tidewater. Where one or more of these conditions are not met, schedule applications to allow at least 5 hours of drying time before plants are covered by tidewater. Broadcast applications shall not be made when wind speed at the application site exceeds 10 miles per hour.

Do not apply more than the maximum application rate of 8 quarts per acre per year for broadcast (ground or air) application. The maximum application rate of 7.5 pints per acre must not be exceeded in any single broadcast application that is being made over water.

### **Broadcast Application (Ground):**

Apply 2 to 8 quarts of this product in 5 to 100 gallons of spray solution per acre. For best results complete coverage of Cordgrass clumps is required.

**Hand-held, Backpack or High-Volume Equipment:** Apply a 2 to 8% solution of this product. Ensure that complete coverage of Cordgrass clumps is achieved. Do not spray to the point of runoff.

**Broadcast Application (Air):** Apply 2 to 8 quarts of this product in 5 to 100 gallons of spray solution per acre. Maintain at least a 50-foot buffer between commercial shellfish beds and treated areas. The potential for spray drift is dependent upon weather- and equipment-related factor. The applicator must be familiar with local wind patterns and monitor and record temperature and wind speed prior to and periodically during application. Schedule application in order to allow at least 5 hours before treated plants are covered by tidewater.

**Wiper Applications:** For wick or wiper applications, mix 1 gallon of this product with 2 gallons of clean water to make a 33% solution. A nonionic surfactant at a rate of 10% by volume of the total herbicide solution may be added. In heavy stands, a double application in opposite directions may improve results.
