

FIFRA 2(ee) Recommendation

**FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE(S) OF ARKANSAS,
CALIFORNIA, FLORIDA, LOUISIANA, MISSOURI, MISSISSIPPI, TEXAS.**

This recommendation is valid until December 31, 2028.

MINUET™

EPA Reg. No. 264-1202

**Aerial and Foliar application for suppression of Bakanae – *Gibberella fujikuroi*,
Fusarium spp., *Macrophomina* spp., *Phytophthora* spp., *Pythium* spp.,
Rhizoctonia spp., and *Verticillium* spp. as a foliar application to crops of Rice
subgroups (15 – 22f): Rice; Rice, African; Wild rice; Wild rice, eastern; cultivars,
varieties, and hybrids of these commodities.**

FIFRA Section 2(ee) Recommendation: This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA. This product bulletin should be in the possession of the user at the time of application of the product. All applicable directions, restrictions and precautions on the EPA registered label are to be followed.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its label.

APPLICATION INSTRUCTIONS

Aerial

This product can be applied by aerial application. Refer to the Spray Drift Management section of this label for additional directions and precautions. Use the application rate, indicated for the appropriate crop in the Application Rate tables of this label, in sufficient water to achieve thorough coverage, typically between 3 – 20 gallons of water per acre depending upon the crop.

Aerial Applications

Mount the spray boom on the aircraft so as to minimize drift caused by wing tip vortices.

The minimum practical boom length should be used and should not exceed 75% of the wingspan or rotor diameter.

Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety.

Foliar Spray Application Instructions

Begin applications when environmental conditions are conducive to disease development and repeat as needed. MINUET has a 0-Day Pre-Harvest Interval for all crops contained on this label. Applying MINUET to the soil at plant establishment will enhance root colonization. For improved performance under moderate to severe disease pressure, use the stated higher rates and reduced spray intervals as stated or use MINUET in a tank-mix or rotational program with other registered fungicides.

Use Rates

Apply MINUET at 6 to 12 oz/acre in sufficient water to achieve thorough coverage. Overall, to achieve good coverage, use proper spray pressure, gallonage per acre, nozzles, nozzle spacing and ground speed.

RICE – FOLIAR APPLICATION	
Crops of Rice subgroup (15 – 22F): Rice; Rice, African; Wild rice; Wild rice, eastern; cultivars, varieties, and hybrids of these commodities.	
Target Diseases	Rate (oz/acre)
Bakanae* – <i>Gibberella fujikuroi</i> Fusarium spp. Macrophomina spp. Phytophthora spp. Pythium spp. Rhizoctonia spp. Verticillium spp.	6 - 12
*NOT FOR USE IN CALIFORNIA	

IMPORTANT

Refer to the MINUET label for additional information and use directions. The most restrictive provision of any label should apply.
