## Section 24(c) Special Local Need Label

CYPRODINIL	GROUP	9	FUNGICIDE
FLUDIOXONIL	GROUP	12	FUNGICIDE

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

Switch® 62.5WG  
EPA Reg. No. 100-953  
EPA SLN No. WA-020016

**For Control of Several Diseases on Specified Brassica Vegetable Crops Grown for Seed**

**This label for Switch 62.5WG expires and must not be distributed or used in accordance with this SLN registration after December 31, 2029.**

### Directions for Use

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- This SLN label and the federal label for this product must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on this SLN label and on the EPA registered label.

**Brassica Vegetable Crops Grown for Seed:** Broccoli, Broccoli raab, Brussels sprout, Cabbage, Cauliflower, Chinese cabbage, Chinese broccoli (Chinese kale), Collard, Kale, Kohlrabi, Mustard (including Chinese mustard), Radish (other than Daikon), Rape, Rutabaga, Spinach mustard, Turnip.

**Pests Controlled:** Alternaria Leaf/Pod Spot (*Alternaria brassicicola* and *Alternaria brassicae*), White Mold (*Sclerotinia sclerotiorum*), and Gray Mold (*Botrytis cinerea*)

**Application Rate:** Apply 14 oz. of Switch 62.5WG per acre (0.33 lb cyprodinil and 0.22 lb fludioxonil per acre).

**Application Method/Frequency/Timing:** Apply in sufficient water to provide thorough coverage using ground application equipment only.

Begin applications preventively at early bloom and repeat on a 7-10 day interval if conditions remain favorable for disease development.

### Restrictions/Precautions

- Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.
- Do not apply more than 56 oz. of Switch 62.5WG per acre per year.

- Do not apply more than 1.3 lb. a.i. of cyprodinil containing products and 0.9 lb. a.i. of fludioxonil containing products per acre per year.
- Do not apply within 7 days of harvest (7-day PHI).
- Resistance Management: After 2 applications of Switch 62.5WG, alternate with another fungicide with a different mode of action for 2 applications.
- Chemigation: For use in accordance with this SLN label **do not** apply this product through any type of irrigation system.
- Ground Water Advisory: This chemical has properties and characteristics associated with chemicals detected in groundwater. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.
- Surface Water Advisory: This chemical may contaminate water through drift of spray in wind. This chemical has a high potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this chemical. A level, well maintained vegetative buffer strip between areas to which this chemical is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this chemical will be reduced by avoiding applications when conditions favor runoff (for example when soils are saturated and/or significant rainfall is forecast in the next 48 hours). Sound erosion control practices will reduce this chemical's contribution to surface water contamination.
- This pesticide is toxic to fish, aquatic invertebrates, oysters and shrimp. For terrestrial uses: Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate.
- To avoid spray drift, DO NOT apply when conditions favor drift beyond the target area. Avoid spray overlap, as crop injury may occur.
- **Crops Grown for Seed**
  1. All Brassica vegetable seed screenings shall be disposed of in such a way that they cannot be distributed or used for human food or animal feed. The seed conditioner shall keep records of screening disposal for three years from the date of disposal and shall furnish the records to the director immediately upon request. Conditioner disposal records shall consist of documentation of on-farm disposal, disposal at a controlled dumpsite, incinerator, composter or other equivalent disposal site and shall include the lot numbers, amount of material disposed of, the grower(s), and the date of disposal.
  2. No portion of the Brassica vegetable seed plant, including but not limited to green chop, hay, pellets, meal, whole seed, cracked seed, roots, bulbs, leaves and seed screenings may be used or distributed for food or feed purposes.
  3. Brassica vegetable seed shall bear a tag or container label which forbids use of the seed for human consumption or animal feed.
  4. Brassica vegetable seed may not be distributed for human consumption or animal feed.

Producers of Brassica vegetable seed who use this product are required to inform, in writing, conditioners receiving seed produced on fields treated with this product. A copy of this labeling is required to be provided to the conditioner by the producer.

**WSDA Container Disposal Guidance:** Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is

available on the WSDA website under the Waste Pesticide Program. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
