## BLUEBERRY (Highbush)

| Target Pest  | Rate<br>(fl oz / A) | Application Instructions   |
|--|---------------------|--|
| Cherry Fruitworm<br>( <i>Grapholita packardii</i> )  | 20 - 30             | <p>Make application when adults are observed and prior to egg laying.</p> <p>Applications may also be made when the majority of the population is at egg hatch to the second instar.</p> <p>Transovarial control via females laying non-viable eggs may occur if applications are made when adults are first observed and prior to egg laying.</p> |
| <ul style="list-style-type: none"> <li>Some phytotoxic symptoms to foliage in the form of mottled chlorosis may be observed when <b>RIMON 0.83EC Insecticide</b> is applied to blueberries under conditions of high temperatures and/or drought stress, particularly during periods of new tender shoot growth. Such phytotoxic symptoms will not occur on future growth and will not affect fruiting or yields. Higher spray volumes and lower spray concentration will minimize the risk of transient phytotoxic symptoms on newly expanded foliage.</li> <li>Use higher rates and higher spray volumes when larvae are large or foliage canopy is tall or dense.</li> <li>Repeat applications as needed to protect new foliage growth and fruit but do not apply less than 10 days apart.</li> <li>Do not apply more than 90 fl oz per acre per year (0.58 lb ai per acre per year).</li> <li>Do not apply within 8 days of harvest.</li> </ul> |                     |  |
