

Supplemental Labeling

Goal[®] 2XL

EPA Reg. No. 92894-2-71368

24(c) Special Local Need Registration SLN SC-960008

For Weed Control for Non-Crop Use

(For Distribution and Use Only in the State of South Carolina)

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This label must be in the possession of the user at the time of pesticide application.
- Read the label affixed to the container for Goal[®] 2XL herbicide before applying. Follow all other applicable directions, restrictions, and precautions on the EPA-registered label.
- Use of Goal 2XL according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Goal 2XL.
- Before using this product, read the entire Precautionary Statements, Conditions of Sale and Warranty, Directions for Use, Use Restrictions, and Storage and Disposal Instructions. If the Conditions of Sale and Warranty are not acceptable, return the product unopened within thirty days of purchase to the place of purchase.

Directions for use

Goal 2XL herbicide provides postemergence and preemergence control of witchweed on non-crop areas including fence rows, storage yards, roadsides, farmsteads and other similar non-crop locations.

This pesticide is toxic to wildlife and fish. Use with care when applying in areas frequented by wildlife or adjacent to any body of water. Refer to container label for additional handling and use warnings.

For use only in conjunction with the witchweed eradication program in South Carolina.

Dosage

Goal 2XL herbicide is recommended for postemergence and preemergence control of witchweed (*Striga asiatica*). Goal 2XL herbicide is recommended for postemergence control at 2 to 4 pints (0.5 to 1.0 lb. active) per broadcast acre. Higher rates should be used for the control of dense populations of witchweed or where large witchweed plants are present.

It is recommended that Latron AG-98 or a comparable 80% active nonionic surfactant be added to the spray mixture at a rate of 0.125% v/v (1 pint per 100 gallons of spray mix).

Witchweed Stage

Goal 2XL herbicide must be applied to witchweed plants before blooms form, to prevent the production of viable seed.

Method of Application

Goal 2XL herbicide should be applied in a minimum of 10 gallons of water per acre. The volume of water used should be increased as the weeds become taller and more dense. Use a low-pressure sprayer equipped with flat fan or whirl chamber nozzles. Spray equipment should be calibrated carefully before each use.

Cultural Considerations

For acceptable preemergence activity, at least one-quarter inch (1/4 inch) of water or rainfall is necessary within 1 to 2 weeks after application. Cultural practices that result in redistribution or disturbance of the soil surface after treatment will decrease the herbicidal effectiveness of Goal 2XL herbicide. The best results from Goal 2XL herbicide are from applications to soil surfaces that are left undisturbed during the time period for which weed control is desired.

Use Precautions

- Follow General Use Restrictions listed on the Goal 2XL label.
- Do not treat ditchbanks or waterways with Goal 2XL herbicide.
- **Chemigation: Do not** apply this product through any type of irrigation system.

All applicable directions, restrictions and precautions on the EPA-registered label are to be followed.

This labeling must be in the possession of the user at the time of application.
