DIRECTIONS FOR USE

Apply Brigade® 2EC Insecticide/Miticide at crop specific rate by ground or aerial equipment using sufficient spray volume to obtain thorough and uniform coverage of the target plant and foliage. Use a minimum of 2 gallons of finished spray per acre by air or 10 gallons of finished spray per acre by ground. The addition of 1-2 quarts of emulsified oil per acre to the spray solution may improve spray deposition and insect control. Apply as required by scouting. Timing and frequency of applications should be based upon insect populations reaching locally determined economic thresholds.

Repeat applications of BRIGADE 2EC Insecticide/Miticide as necessary to maintain control and prevent reinfestation from migrating adults into the crop. Brown marmorated stink bugs are very mobile and may re-infest crops quickly. Consult the label for maximum application rates, number and retreatment intervals. If another application is needed prior to the minimum retreatment interval, use another insecticide to maintain control.
