

Section 24(c) Special Local Need Label

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

**Fusilade DX Herbicide
For Control of Annual and Perennial Grassy Weeds Including Quackgrass in Alfalfa
Grown for Seed**

**EPA Reg. No. 100-1070
EPA SLN No. WA-040007**

**This label for Fusilade DX Herbicide expires and must not be distributed or used in
accordance with this SLN registration after December 31, 2025**

DIRECTIONS FOR USE

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered label.
- Read and understand Syngenta's Special Conditions, Risks of Use and Disclaimer for Use before using Fusilade DX Herbicide on Alfalfa Grown for Seed.

Alfalfa Grown for Seed

Application Methods

Ground Application: Use sufficient spray volume and pressure to ensure complete coverage. Use 5-40 gallons of spray volume per acre and 40-60 psi pressure. A sufficient spray volume and pressure should be used to provide complete coverage of the treated grass weed species. Use higher volumes and pressure if the grass foliage is dense to ensure complete coverage.

Aerial Application: Use a minimum of 5 gallons per acre. If the grass foliage is dense, increase the spray volume to 10 gallons per acre to improve spray coverage.

Application Rates and Timing

Make foliar applications by ground or air using the rates and timings given below:

| Weed | Application | Height (inches) | Rate (fl oz/A) |
|--------------------------------------|-----------------|-----------------|----------------|
| Bermudagrass ¹ | 1 st | 4-8 | 12 |
| | 2 nd | 4-8 | 8 |
| Quackgrass ² | 1 st | 6-10 | 12 |
| | 2 nd | Up to 10 | 8 |
| Rhizome Johnsongrass ¹ | 1 st | 8-18 | 12 |
| | 2 nd | 8-12 | 8 |

¹Make second application to Bermudagrass if regrowth occurs (usually about 4 weeks after first application). To improve coverage, make applications in a minimum of 15 gallons per acre.

²Make second application 2-3 weeks after the first, but before the quackgrass exceeds 10 inches in height. Always use 1% v/v crop oil concentrate. Spot treatment is not recommended.

³Make first application before the boot stage.

Environmental Hazards

This pesticide is toxic to fish and aquatic invertebrates. Fusilade DX should not be used under this SLN label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Endangered Species Program website at <http://agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx>, or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.

Restrictions/Precautions

- Always add a crop oil concentrate at 0.5-1.0% or nonionic surfactant at 0.25-0.50% of the finished spray volume unless specified otherwise.
- Make aerial or ground applications when wind velocity favors on target product deposition (approximately 3-10 mph). Do not apply when wind velocity exceeds 10 mph.
- Do not plant rotational grass crops such as corn, sorghum and cereals within 60 days after last application.
- Do not exceed a total of more than 20 fl. oz. of Fusilade DX Herbicide per acre per year.
- Observe a Restricted Entry Interval (REI) of 12 hours.
- Chemigation: For use under this SLN label do not apply this product through any type of irrigation system.

Crops Grown for Seed

1. All alfalfa seed screenings shall be disposed of in such a way that they cannot be distributed or used for human food or animal feed. The seed conditioner shall keep records of screening disposal for three years from the date of disposal and shall furnish the records to the director immediately upon request. Conditioner disposal records shall consist of documentation of on-farm disposal, disposal at a controlled dumpsite, incinerator, composter or other equivalent disposal site and shall include the lot numbers, amount of material disposed of, the grower(s), and the date of disposal.
2. No portion of the alfalfa seed plant, including but not limited to green chop, hay, pellets, meal, whole seed, cracked seed, roots, bulbs, leaves and seed screenings may be used or distributed for food or feed purposes.

3. Alfalfa seed shall bear a tag or container label, which forbids use of the seed for human consumption or animal feed.
4. Alfalfa seed may not be distributed for human consumption or animal feed.

WSDA Container Disposal Guidance: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at:

<http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx>. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington
