Blackhawk[®]

EPA Reg. No. 62719-523

Special 2(ee) Recommendation[†]
(For Distribution and Use in the State of Texas)

For Control of Potato Psyllid in Potato

Refer to product label for Blackhawk for general use precautions, mixing directions, application directions, and restrictions.

ATTENTION

[†]This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- Read the label affixed to the container for Blackhawk[®] Naturalyte[®] Insect Control before applying. Carefully follow all precautionary statements and applicable use directions except as specified below.
- Use of Blackhawk according to this Section 2(ee) recommendation is subject to all use precautions and limitations imposed by the label affixed to the container for Blackhawk.

Directions for Use

Blackhawk should be used as part of an integrated program to manage potato psyllid.

Apply 3.5 ounces of Blackhawk per acre per application (0.079 lb ai/acre spinosad) to potatoes for control of potato psyllid. Begin applications at first signs of infestations. Due to the occurrence of multiple generations in a growing season, repeated applications may be required. Under moderate to high pest pressure, do not extend the application interval beyond 7 to 10 days. Follow resistance management recommendations on the product label.

Blackhawk is a Group 5 insecticide (spinosad and spinetoram active ingredients). Do not make more than four applications of a Group 5 insecticide per crop.

Consult your Dow AgroSciences representative, extension service specialist, certified crop advisor or your state agricultural experiment station for any additional local use recommendations for your area. Refer to specific crop sections of the product label for additional information and restrictions.
