

**FIFRA §2(ee) RECOMMENDATION  
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF CALIFORNIA, COLORADO,  
FLORIDA, IDAHO, MAINE, MICHIGAN, MINNESOTA, NEBRASKA, NORTH CAROLINA,  
NORTH DAKOTA, OREGON, WASHINGTON AND WISCONSIN**

**EPA Reg. No. 10163-331**

**For the control of Grey mold, botrytis vine rot (*B. cinerea*) in potatoes**

**PRODUCT INFORMATION**

Zing! is a broad-spectrum protectant fungicide. Optimum disease control is achieved when the fungicide is used according to label directions and applied in a regularly scheduled preventative spray program. The addition of an agricultural surfactant will improve fungicide performance by providing a more uniform spray deposit, increased foliar redistribution, and improved fungicide retention during periods of wet weather.

The use of Zing! is compatible with the principles of Integrated Pest Management (IPM) and programs that attempt to minimize disease resistance to fungicides. Unlike single-site mode of action fungicides which are at risk from disease resistance, Zing!, with a multi-site mode of action, may be used to delay or prevent the development of resistance to single site fungicides. Consult with your Federal or State Cooperative Extension Service representatives for guidance on the proper use of Zing! in IPM and resistance management programs.

**DIRECTIONS FOR USE**

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- All applicable directions, restrictions, and precautions on the EPA registered label are to be followed.
- This recommendation must be in the possession of the user at the time of pesticide application.
- This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA.

<b>Crop</b>	<b>Diseases Controlled</b>	<b>Rate per Acre (fl oz/Acre)</b>	<b>Remarks (Also Refer to Directions for Use in Section 3 label)</b>
<b>Potatoes (7)</b>	Grey mold, botrytis vine rot ( <i>B. cinerea</i> )	30-34 fl oz/A  (0.17-0.19 lb zoxamide and 0.98 -1.11 lb chlorothalonil)	Apply on a preventative schedule. Begin applications when conditions are favorable for disease development. Use a 5 to 7 day schedule (the minimum re-treatment interval is 5 days) when disease is present and environmental conditions favor continued disease development. Use the highest rate and shortest interval when plants are rapidly growing and disease conditions are severe. Use the maximum labeled rate at row fill. Under low disease conditions and environmental conditions unfavorable for disease development, a 7 to 14 day application schedule may be used. Increase water spray volume as canopy density increases. Apply by ground, aerial or chemigation. Do not exceed a 10 day interval between applications when using chemigation.
			<b>Restrictions</b>
			<ul style="list-style-type: none"><li>• Do not make more than 2 sequential applications before alternating with a fungicide that has a different mode of action.</li><li>• Do not make more than 8 applications or apply more than 1.52 lb zoxamide and 8.88 lb chlorothalonil per acre per year.</li><li>• Do not apply within 7 days of harvest</li></ul>
