

SUPPLEMENTAL LABEL

For Use on Wheat and Barley

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This labeling must be in the possession of the user at the time of application. Read the label affixed to the container for Toledo™ Agricultural Fungicide before applying. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the registered product label for Toledo™ Agricultural Fungicide.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to mammals, fish and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory: Tebuconazole is known to leach through soil into ground under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground-water contamination.

Surface Water Advisory: This product may contaminate water through drift of spray in wind. This product has a high potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to runoff that contains this product. A level, well maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall-runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted within 48 hours.

USE DIRECTIONS FOR BARLEY

Crop	Disease	Rate of Toledo™ Agricultural Fungicide
Barley	Rusts (<i>Puccinia spp.</i>) Head blight (<i>Fusarium spp.</i>) — Suppression	4 fl. oz. per acre

Application Directions

Apply Toledo™ Agricultural Fungicide in a minimum of 10 gallons of spray solution per acre by ground or in a minimum of 5 gallons of spray solution per acre by air. A maximum of 4 fl. oz. of Toledo™ Agricultural Fungicide may be applied per acre per crop season. Do not apply within 30 days of harvest. Straw cut after harvest may be fed or used for bedding. Grazing livestock or feeding of green forage is permitted 6 or more days after the last application of Toledo™ Agricultural Fungicide. Barley fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development.

Rusts: Apply Toledo™ Agricultural Fungicide at the earliest sign of rust pustules on foliage.

Fusarium head blight: Optimal timing of Toledo™ Agricultural Fungicide for Fusarium head blight suppression is when main stem heads have fully emerged (Feekes 10.5) on 50% of the plants.

NOTE: For optimum disease control, the lowest specified rate of a spray surfactant should be tank-mixed with Toledo™ Agricultural Fungicide. Toledo™ Agricultural Fungicide must have two to four hours of drying time on plant foliage for the active ingredient to move systematically into plant tissue before rain or irrigation occurs. After this period of time, Toledo™ Agricultural Fungicide will be resistant to weathering.

USE DIRECTIONS FOR WHEAT

Crop	Disease	Rate of Toledo™ Agricultural Fungicide
Wheat	Rusts: leaf, stem, and stripe (<i>Puccinia spp.</i>) Head blight or scab (<i>Fusarium spp.</i>) — Suppression	4 fl. oz. per acre

Application Directions

Wheat fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development. A maximum of 4 fl. oz. of Toledo™ Agricultural Fungicide may be applied per acre per crop season. Do not apply within 30 days of harvest. Straw may be fed or used for bedding. Do not allow livestock to graze or feed green forage to livestock prior to 6 days after treatment with Toledo™ Agricultural Fungicide. Apply Toledo™ Agricultural Fungicide in a minimum of 10 gallons of spray solution per acre by ground, or in a minimum of 5 gallons of spray solution per acre by air.

Rusts: Apply Toledo™ Agricultural Fungicide at the earliest sign of rust pustules on foliage.

Fusarium head blight: Optimal timing of Toledo™ Agricultural Fungicide for Fusarium head blight suppression is the beginning of flowering on main stem heads (Feekes 10.5).

NOTE: For optimum disease control, the lowest specified rate of a spray surfactant should be tank mixed with Toledo™ Agricultural Fungicide. Toledo™ Agricultural Fungicide must have two to four hours of drying time on plant foliage for the active ingredient to move systematically into plant tissue before rain or irrigation occurs. After this period of time, Toledo™ Agricultural Fungicide will be resistant to weathering.
