DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

This labeling and the EPA approved container label must be in the possession of the user at the time of application. Read the label affixed to the container for FujiMite® SC Miticide/Insecticide before applying. Use of FujiMite SC Miticide/Insecticide according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the container for FujiMite SC Miticide/Insecticide.

For Control of Citrus Mealybug (*Planococcus citri*) in Citrus Fruits

- Apply FujiMite SC Miticide/Insecticide at 3.0 to 4.0 pints (0.158 to 0.210 lb ai) per acre.
- Apply by ground using 200 to 750 gallons of water per acre or an adequate spray volume to obtain complete spray coverage of the infested foliage and fruit.
- Use a safe surfactant such as 415 oil to improve spray coverage.
- FujiMite SC Miticide/Insecticide is effective on all mealybug stages including adults. For best results, application should be made when most of the population is at the first or second instar life stage.
- FujiMite SC Miticide/Insecticide is a contact insecticide on mealybugs; therefore, direct contact with the insect is necessary to achieve maximum control.
- For best results, tractor speed should not exceed 1.5 mph.
