

TRICLOPYR	GROUP	4	HERBICIDE
CLOPYRALID	GROUP	4	HERBICIDE

PRODUCT INFORMATION BULLETIN

PRESCOTT HERBICIDE

EPA Reg. No. 81927-30

FIFRA 2(ee) Recommendation*

THIS RECOMMENDATION, WHICH CONTAINS ADDITIONAL DIRECTIONS FOR USE, IS MADE AS PERMITTED UNDER FIFRA SECTION 2(ee) AND HAS NOT BEEN SUBMITTED TO OR APPROVED BY THE US EPA

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING. ALL APPLICABLE DIRECTIONS, RESTRICTIONS AND PRECAUTIONS ON THE EPA REGISTERED LABEL MUST BE FOLLOWED.

THESE USE DIRECTIONS MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF PESTICIDE APPLICATION

This recommendation is valid until December 31, 2028, or until withdrawn, canceled or suspended

For Distribution and Use Only in the States of AL, AR, FL, GA, IA, ID, KS, KY, LA, MO, MS, NC, ND, NE, OK, OR, SC, SD, TN, UT, VA, WA, and WV

Applications of PRESCOTT HERBICIDE Impregnated on Dry Fertilizer

Directions for Use

NOTE: It is the responsibility of the individual and/or company selling the fertilizer/herbicide mixture to follow all state regulations relating to dry bulk fertilizer blending, labeling and application.

IMPREGNATION: The herbicide/fertilizer impregnation process must be done at commercial fertilizer or chemical dealerships that are properly equipped for this procedure and **the mixing and application equipment must be dedicated for use only on grasslands.**

NOTE: The practice of impregnating PRESCOTT HERBICIDE on dry fertilizer is recommended only for dealers whose primary business is range and pasture. **The rates recommended to control the weed and brush species listed on the label were determined using foliar broadcast applications in water. Fertilizer impregnation with PRESCOTT HERBICIDE may or may not provide the same level of control as the foliar broadcast application.**

USE RESTRICTIONS

- In Arizona: The state of Arizona has not approved Alligare Prescott Herbicide for use on plants grown for commercial production, specifically on designated grazing areas.
- In Florida, the maximum use rate is 2 2/3 pints (0.75 lb ae triclopyr, 0.25 lb ae clopyralid) per acre per annual use season.
- Maximum Application Rate: Do not apply more than 4 pints per acre of Alligare Prescott Herbicide per annual growing season (1.125 lb ae of triclopyr plus 0.375 lb ae of clopyralid).
- Chemigation: Do not apply this product through any type of irrigation system.

- **Rotation to Broadleaf Crops:** Do not plant broadleaf crops such as tobacco, cotton, soybeans, sunflower, clover, alfalfa, and many others in treated areas until an adequately sensitive bioassay shows that clopyralid is no longer detectable in the soil.
- **Field Bioassay Instructions:** in fields previously treated with this product, plant short test rows of the intended rotational crop across the original direction of application in a manner to sample field conditions such as soil texture, soil pH, drainage, and any other variable that could affect the seed bed of the new crop. Field bioassay at any time prior to planting of the intended rotational crop. Observe the test crop for herbicidal activity, such as poor stand (effect on seed germination) chlorosis (yellowing), and necrosis (dead leaves or shoots), or stunting (reduced growth). If herbicidal symptoms do not occur, the test crop can be grown. If there is apparent herbicidal activity, wait one year before repeating bioassay or plant a crop tolerant to clopyralid such as barley, canola (rapeseed), grasses, field corn, oats, sugar beets, or wheat.
- **Do not contaminate water intended for irrigation or domestic purposes:** To avoid injury to crops or other desirable plants, do not treat or allow spray drift to fall onto banks or bottoms of irrigation ditches or other channels that carry water that may be used for irrigation purposes.
- **Do not spray pastures if injury to existing forage legumes or other desirable broad leaf plants cannot be tolerated.** This product will injure or kill legumes and most other broadleaf plants. However, the stand and growth of established perennial grasses is usually improved after treatment, especially when rainfall is adequate and grazing is deferred.
- **Do not apply to desirable legume species with exposed roots or suckers such as pod bearing plants like acacia, locust, mimosa, redbud, or mesquite.**
- **Do not use on smooth brome grass grown for seed.**
- **Do not apply this product with a mistblower.**

GRAZING AND HAYING RESTRICTIONS

Grazing or harvesting green forage:

1. **Lactating dairy animals:** Do not graze or harvest green forage from treated area until the next growing season.
2. **Other Livestock:** There are no grazing restrictions for other livestock including horses, sheep, goats, pigs, etc.

Haying (harvesting of dried forage):

1. **Lactating dairy animals:** Do not harvest hay until the next growing season.
2. **Other Livestock:** Do not harvest hay for 14 days after treatment.

Slaughter Restrictions:

Withdraw livestock from grazing treated grass or consumption of treated hay at least 3 days before slaughter. This restriction applies to grazing during the season of treatment or hay harvested during the season of treatment.

Do not transfer livestock from treated grazing areas (or feeding of treated hay) to sensitive broadleaf crop areas without first allowing 7 days of grazing on an untreated pasture (or feeding of untreated hay). If livestock are transferred within less than 7 days of grazing untreated pasture or eating untreated hay, urine and manure may contain enough clopyralid to cause injury to sensitive broadleaf plants.

Grazing poisonous plants: Herbicide application may increase palatability of certain poisonous plants. Do not graze treated areas until poisonous plants are dry and no longer palatable to livestock.

APPLICATION DIRECTIONS

The target rate of PRESCOTT HERBICIDE should be impregnated on a minimum of 200 lbs of dry fertilizer per acre to insure sufficient dry fertilizer volume for adequate coverage when applied. It is recommended that a dye be added to the slurry to differentiate the impregnated fertilizer from non-treated fertilizer. The addition of a surfactant or MSO is recommended to enhance the coverage on the fertilizer prills. The use of a drying agent is recommended when impregnating dry fertilizer with PRESCOTT HERBICIDE.

PRESCOTT HERBICIDE can be applied to and mixed with fertilizer undiluted unless volumes of fertilizer exceed 400 lbs per acre or the operator observes incomplete coverage. For higher fertilizer volumes, a slurry of 1 part PRESCOTT HERBICIDE with up to 5 parts water can be used to improve coverage of fertilizer prills. After the herbicide has been applied to the fertilizer, continuously mix the fertilizer in the mixer for as long as needed to ensure uniform prill coverage with PRESCOTT HERBICIDE. Continuous agitation (mechanical or recirculating) is needed to improve PRESCOTT HERBICIDE impregnation on dry fertilizer.

The delivery nozzle(s) must be placed inside the mixer and positioned to provide uniform spray coverage of the tumbling fertilizer. Use PRESCOTT HERBICIDE impregnated dry fertilizer as soon as possible after blending.

APPLICATION: Apply PRESCOTT HERBICIDE impregnated dry fertilizer during the normal fertilizer schedule for your grassland. When using fan spreaders, a 100% overlap is recommended. Fan spreaders should be calibrated to apply $\frac{1}{2}$ the desired rate per acre. Application pattern should be overlapped to cover $\frac{1}{2}$ of the previous swath. Nonuniform spreading of the herbicide-fertilizer mixture may result in unsatisfactory weed control or crop injury.

Follow all applicable use directions, precautions, and limitations on the EPA-registered label for PRESCOTT HERBICIDE.

It is impossible to eliminate all risks associated with the use of this product. Crop injury, lack of performance, or other unintended consequences may result because of numerous factors including, but not limited to, use of the product contrary to label instructions (including, but not limited to, conditions noted on the label, such as unfavorable temperatures, soil conditions and other similar factors), abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes and other similar conditions), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Alligare, LLC or the seller. To the extent permitted by law, all such risks shall be assumed by buyer.
