

FIFRA §2(ee) RECOMMENDATION

For Reduced Spray Volume Dormant Season Application on Tree Fruit, Nut and Vine Crops

FIFRA Section 2 (ee) Recommendation for use in IDAHO, OREGON and WASHINGTON

Galigan® 2E

EPA Reg. No. 66222-28

FIFRA Section 2 (ee) Recommendation: This recommendation is made as permitted under FIFRA Section 2 (ee) and has not been submitted to or accepted by the U.S. Environmental Protection Agency.

DIRECTIONS FOR USE

- It is a violation of Federal law to use this product inconsistent with its labeling.
- This product bulletin must be in the possession of the user at the time of pesticide application.
- Read the "Limitation of Warranty and Liability" in the label booklet for Galigan® 2E before using.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

Spray Volume for Dormant Applications on Tree Fruit, Nut and Vine Crops

Application Methods and Recommended Cultural Practices – Post emergence Weed Control: Apply the specified rate in a broadcast spray volume of 20 or more gallons of water per acre (a minimum of 10 gallons if applying Galigan 2E in a tank mix with glyphosate or other contact herbicides which specify 10 gallons). As Galigan 2E has contact activity, optimum post-emergence control will be achieved with uniform coverage of weed foliage. The spray volume should be increased under heavy weed pressure or when crop residue is present. Post-emergence applications of Galigan 2E are most effective when made to weeds at the seedling stage. Partial control of suppression may result when applications are made later than the 4-inch or 4 leaf stage. For maximum control, make post-emergence applications to seedling grasses not exceeding the 1-leaf stage. The addition of a non-ionic surfactant applied at 0.25% v/v (2 pints/100 gallons of spray solution) will enhance effectiveness in controlling emerged weeds.

Galigan® 2E is a registered trademark of an ADAMA Group Company.
