

# SARISA™

## Supplemental Labeling

(EPA Reg. No. 71512-32-59807)

### SUPPLEMENTAL DIRECTIONS FOR THE CONTROL OF LISTED PESTS ON GREENHOUSE CUCUMBER

This Supplemental Label Expires on December 31, 2025 and must not be used or distributed after this date.

#### DIRECTIONS FOR USE:

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This labeling must be in possession of the user at the time of application. Read the label affixed to the container for SARISA before applying. Use of SARISA according to this labeling is subject to the use directions, restrictions and precautions imposed by the label affixed to the container for SARISA.

CROP: GREENHOUSE CUCUMBER (0 DAY PHI)	
PESTS	RATE PER ACRE
Cucumber beetle Lepidoptera thrips	27.1 fl oz (0.054 to 0.089 lb. ai/A)  or  0.38 to 0.62 fl oz per 1000 sq ft (0.0012 to 0.002 lb ai per 1000 sq ft)
APPLICATION DIRECTIONS	
<p>Begin applications before populations begin to build and before damage is evident, according to local pest management guidelines. Scout fields often and retreat as necessary to maintain populations below damaging levels, but make no more than 3 applications per year. Rapidly growing plants may need retreatment. Apply SARISA in a minimum of 30 gallons of spray solution per acre. Performance may be enhanced when used with methylated seed oil (MSO) or other high quality adjuvants at a rate of 0.025% to 0.1% on a volume to volume basis.</p> <p>Do not apply SARISA or other Group 28 insecticide more than 3 times within a single generation of insect pest(s) on a crop. Foliar application of this product is prohibited to a crop from onset of flowering until flowering is complete unless the rate is limited to 0.054 lb. a.i./A and the application is being made in the time period between 2 hours prior to sunset until sunrise OR the application is being made at a time when the temperature at the application site is 50 degrees F or less. In California no more than one application may be made from the onset of flowering until flowering is complete. Applications must be made when bees are not foraging, adhering to the above restrictions. If an application must be made when managed bees are at the treatment site, the beekeeper providing the pollination services must be notified no less than 48-hours prior to the time of the planned application so that bees can be removed, covered or otherwise protected prior to spraying.</p> <p>Do not exceed 27.1 fl oz (0.089 lb ai/A) per application. Do not make more than 3 applications per calendar year. Do not apply more than 81.3 fl oz/acre/ calendar year (0.27 lb ai/acre/year). In New York State, do not apply more than 54 fl oz per acre per year (0.18 lb ai/acre/calendar year). Minimum interval between treatments is 7 days (14 days in California).</p>
