Tolvera™

EPA Reg. No. 62719-761

2(ee) Recommendation†

For Distribution and Use Only in the States of Idaho, Montana, Oregon, and Washington

Recommendation for suppression of Mayweed chamomile/dogfennel (*Anthemis cotula*)

ATTENTION

†This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- Read the label affixed to the container for Tolvera™ before applying. Carefully follow all precautionary statements and applicable use directions except as specified below.
- Use of Tolvera™ according to this Section 2(ee) recommendation is subject to all use precautions and limitations imposed by the label affixed to the container for Tolvera™.

Directions for Use

Apply 11 fl oz (0.013 lb ai tolpyralate – 0.134 lb ae bromoxynil) or 14.7 fl oz (0.0178 lb ai tolpyralate – 0.178 lb ae bromoxynil) of Tolvera™ per acre to actively growing wheat (including spring, winter and durum), and barley from the 1-leaf crop growth stage up to the jointing stage (first node, Zadoks scale 31). Winter wheat applications can be made in the fall or spring. Use the 14.7 fl oz/A (0.0178 lb ai tolpyralate – 0.178 lb ae bromoxynil) rate of Tolvera™ for more robust control when weed populations are high, weed staging is more advanced, or when weeds are stressed due to environmental conditions including drought or cold weather. For best results apply when susceptible broadleaf weed seedlings are actively growing and less than 4 inches tall. Only weeds emerged at the time of treatment will be controlled.

For more consistent weed control in challenging environments, the use of an oil-based adjuvant (methylated seed oil, crop oil concentrate or high surfactant oil concentrate) at 0.5 to 1 % v/v or 0.5 to 1 gal of adjuvant per 100 gal of spray mixture is advised.

Follow applicable use directions, precautions, and limitations on the Tolvera product label.
