

# NipsIt<sup>™</sup> SUITE

SEED PROTECTANT

## TREATED SEED

This seed has been treated with Nipsit<sup>™</sup> SUITE Cereals OF Seed Protectant which contains clothianidin, metalaxyl and metconazole at the rates recommended by the manufacturers.

**CAUTION**  
**DO NOT USE TREATED SEED**  
**FOR FEED, FOOD OR OIL PROCESSING**

**STORE AWAY FROM FEEDS AND**  
**OTHER FOODSTUFFS**

**KEEP OUT OF REACH OF CHILDREN**

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**  
Wear long-sleeved shirt, long pants and chemical-resistant gloves when handling treated seed.

- Excess treated seed may be used for ethanol production only if (1) by-products are not used for livestock feed and (2) no measurable residue of pesticide remain in ethanol by-products that are used in agronomic practice.
- Dispose of all excess treated seed. Left over treated seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. Do not contaminate water bodies when disposing of planting equipment washwaters.
- Dispose of seed packaging in accordance with local requirements.
- Regardless of the type of application (seed treatment or foliar), do not apply more than a total of 6.4 oz (181.4 gram) clothianidin (active ingredient) per acre per cropping cycle.
- This compound is toxic to birds and mammals. Treated clothianidin seeds exposed on soil surface may be hazardous to birds and mammals. Cover or collect seeds spilled during loading.
- Treated seeds must be planted at a minimum depth of 0.5 inch.
- This compound is highly toxic to bees exposed directly (contact). Ensure that planting equipment is functioning properly in accordance with manufacturing recommendations to minimize seed coat abrasion during planting to reduce dust which can drift to blooming crops or weeds.
- Areas planted with treated seed of barley, oats and wheat may be replanted immediately with bulb vegetables, canola, cereal grains (except rice), cotton, corn (field, pop and sweet), fruiting vegetables (including cucurbits), leafy vegetables (including brassica vegetables), rapeseed, root and tuber vegetables and soybean. These areas may also be replanted after 30 days with dry beans, grasses, non-grass animal feeds and rice. These areas may also be replanted after 8 months with sugarcane. Do not plant any other crop in the treated area for at least one year after these treated seeds are planted.
- After seeds have been planted, do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours. Exception: Once seeds are planted and covered by soil or other planting media, the Worker Protection Standard (WPS) allows workers to enter the treated area without restriction.
- Do not re-use bags from treated seed to handle food or feed products.
