Reproductive toxicity

Do not ingest this product. Animal studies indicate that large amounts of boron (about 30 grams of boric acid) over a short period of time can affect the stomach, intestines, liver, kidney, and brain. Animal studies also indicate that male reproductive organs especially the testes are affected. Although boron has been shown to adversely affect male reproduction in laboratory animals, male reproductive effects attributable to boron have not been demonstrated in studies of highly exposed workers. Animal studies also indicate developmental affects in rib bone development in rib bones and body weight. The exposure levels of boron necessary to produce developmental and reproductive toxic effects in animals are not expected for humans under normal handling conditions for this product.

Target organ effects

Respiratory system, Eyes, Skin.

12. Ecological information

Ecotoxicity

Toxic to aquatic life with long lasting effects.
