FIFRA
Section 2(ee) Recommendation

Date: September 4, 2024

Products: KENJA® 400SC Fungicide
EPA Reg. No. 71512-22-88783

Use: Reduced rate for control of Botrytis bunch rot and powdery mildew on grapes.

States: CA, WA and OR

This recommendation is made under authority of FIFRA Section 2(ee) and recommends the use of KENJA 400SC Fungicide at a reduced rate on grapes for control of Botrytis bunch rot caused by Botrytis cinerea and powdery mildew caused by Erysiphe necator.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Application Rate:

Botrytis bunch rot 9.5 – 22 fl. oz. of KENJA 400SC Fungicide per acre.
Powdery mildew 9.5 – 22 fl. oz. of KENJA 400SC Fungicide per acre.

Application Instructions: For use on all types of grapes (wine, table, raisin, and juice). For bunch rot, make applications at critical timings for Botrytis control. Applications are typically made at early bloom, bunch closure, veraison and pre-harvest (at least 14 days apart). Apply with sufficient water to allow for penetration into the foliage to obtain complete coverage using 50 to 100 gallons of spray volume per acre. For powdery mildew, begin fungicide applications preventatively and continue as needed on a 7 to 14-day interval. When disease pressure is severe use the higher rate and shorter interval.

Resistance Management: Do not make more than 2 sequential applications of KENJA 400SC Fungicide or other Group 7 containing fungicides before rotating to a fungicide with a different mode of action. Do not apply a third application of KENJA 400SC Fungicide within 28 days of the second application.

Restrictions: Do Not apply more than 3 applications/A/year (66 fl oz/A/year (1.72 lb. a.i./A/year)) The Pre-Harvest Interval (PHI) for this crop is 14 days

The user must refer to the federally approved label and read and follow all directions for use, restrictions, and precautions.

The user should have this recommendation in their possession at the time of use.

This recommendation is made as permitted by Section 2(ee) of FIFRA. It has been submitted to, but not yet approved by the US EPA.
