GENERAL INFORMATION

AQUATE MAXX is a multi-functional soil surfactant. When this product is applied to the soil, improved water penetration results from a reduction in surface tension. AQUATE MAXX also induces soil water retention in the plant root zone leading to reduced moisture stress in the commercial crop.

DIRECTIONS FOR USE

Always follow the label recommendations when using this product, unless directed otherwise by the label of a tank mix partner product. The general recommended use rate is 1-2 pints per acre. Soil type and environmental conditions may affect the application rate. (See also SOIL TYPE AND CONDITIONS.)

Application via injection systems: AQUATE MAXX may be applied through irrigation at any time throughout the growing season, as warranted by environmental conditions. Inject 2 pints per acre during early growth stages. Apply 1 pint per acre through subsequent irrigation as needed.

Application via a ground sprayer: This product has been found to be safe when applied to a wide range of crops. Tank mixes with other crop inputs is allowed but should be overhead irrigated soon after application to ensure product performance and mitigate any risk of cosmetic crop response from the tank mix partners.

SOIL TYPE AND CONDITIONS

AQUATE MAXX may be applied across a broad range of soil types. The combination of surfactants in this product help water to penetrate heavy soils and allows water to be retained in coarse soils.

COMPATIBILITY AND MIXING

When mixing this product with plant nutrients or other products, perform a jar test to test compatibility. Agitation is recommended in fertigation tanks to ensure uniform mixing and injection of nutrients and AQUATE MAXX.
