

FIFRA §2(ee) RECOMMENDATION
For distribution and use only
within the states of Alabama,
Florida, Georgia, Louisiana,
Mississippi, New York, Oregon and
Washington

EPA REGISTRATION NO. 5481-626

Additional Directions to the Application Rate Table for Use on Conifers when dilution to 100 Gallons is desired

- It is a violation of Federal law to use this product inconsistent with its labeling.
- This recommendation must be in the possession of the user at the time of pesticide application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.
- This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by U.S. EPA.

DIRECTION FOR USE

CONIFER DISEASE AND APPLICATION RATE TABLE

Application sites: conifer nursery beds, Christmas tree and bough production plantations, tree seed orchards as well as conifers in landscapes of golf courses and around residential, institutional, public, commercial, and industrial buildings, parks, recreational areas and athletic fields.

Diseases	Fluid Ounces of PREVIA fungicide per Acre (lb. AI/A)	Fluid Ounces of PREVIA fungicide per 100 Gallons (lb. AI/100 Gallons)	Application Information
Swiss needlecast (<i>Phaeocryptopus gaeumannii</i>) Interior needle blight (<i>Mycosphaerella</i> spp. and <i>Phaeocryptopus nudus</i>)	44.8 to 88.0 fl. oz./A (2.1 to 4.125 lb. AI/A)	14.9 to 29.3 fl. oz/100 gallons (0.7 to 1.37 lb. AI/100 gallons)	Minimal Application Plan: Make one application in the spring when new shoot growth is 1/2 to 2 inches in length. Under high disease pressure, a second application may be made 10 to 14 days after the first.

Scleroderris canker (<i>Gremmeniella abietina</i>) Swiss needlecast (<i>P. gaeumannii</i>) Interior needle blight (<i>Mycosphaerella</i> spp. and <i>Phaeocryptopus nudus</i>)	24.0 to 44.8 fl. oz./A (1.125 to 2.1 lb. AI/A)	8 to 14.9 fl. oz./100 gallons (0.375 to 0.7 lb. AI/100 gallons)	Multiple Applications: Make the first application in the spring when new shoot growth is 1/2 to 2 inches in length. Make additional applications at 3- to 4-week intervals until conditions no longer favor disease development. For use in nursery beds, apply the highest listed rate on a 3-week schedule.
Sirococcus tip blight	32.0 to 55.5 fl. oz./A (1.5 to 2.6 lb. AI/A)	10.7 to 18.5 fl. oz./100 gallons (0.5 to 0.87 lb. AI/100 gallons)	
Rhizosphaera needlecast (<i>Rhizosphaera</i> spp.) Scirrhia brown spot (<i>Mycosphaerella deamessii</i>)	88.0 fl. oz./A (4.125 lb. AI/A)	29. 3 fl. oz./100 gallons (1.37 lb. AI/100 gallons)	
Cyclaneusma and Lophodermium needlecasts	44.8 to 88.0 fl. oz./A (2.1 to 4.125 lb. AI/A)	14.9 to 29.3 fl. oz/100 gallons (0.7 to 1.37 lb. AI/100 gallons)	Apply in early spring prior to budbreak. Repeat applications at approximately 6- to 8-week intervals, until spore release ceases in late fall. Apply monthly during periods of frequent rainfall and where Lophodermium infections occur during dormancy (Pacific Northwest). During drought conditions, applications may be suspended then resumed upon the next occurrence of needle wetness.
Rhabdocline needlecast	24.0 to 44.8 fl. oz./A (1.125 to 2.1 lb. AI/A)	8 to 14.9 fl. oz./100 gallons (0.375 to 0.7 lb. AI/100 gallons)	Apply at budbreak and repeat at 3- to 4-week intervals until needles are fully elongated and conditions no longer favor disease development. In plantations of mixed provenance, or when irregular budbreak occurs, apply weekly until all trees have broken bud, then every 3 to 4 weeks as specified above. In nursey beds, use the 44.8 fl.oz/A rate on a 3-week schedule.
Botrytis seedling blight Phoma twig blight	24.0 to 44.8 fl. oz./A (1.125 to 2.1 lb. AI/A)	8 to 14.9 fl. oz./100 gallons (0.375 to 0.7 lb. AI/100 gallons)	Begin applications in nursery beds when seedlings are 4 inches tall and when cool, moist conditions favor disease development. Make additional applications at 7- to 14-day intervals as long as favorable conditions for disease persist.
Weir's cushion rust (<i>Chrysomyxa weirii</i>)	88.0 fl. oz./A (4.125 lb. AI/A)	29. 3 fl. oz./100 gallons (1.37 lb. AI/100 gallons)	Begin applications when 10 percent of buds have broken and make two additional applications at 7- to 10-day intervals.
The amount of PREVIA fungicide to mix per 100 gallons is based on an application volume of 300 gallons per acre.			

RESTRICTIONS

- Maximum single application rate is 88.0 fluid ounces of PREVIA fungicide per acre (4.125 lbs. AI per acre) for use on conifers.

- Do not exceed 2.75 gallons of PREVIA fungicide per acre per year (16.5 lbs AI per acre) for use on conifers.
- The minimum re-treatment interval is 7 days on conifers.
- Do not allow livestock to graze in treated areas.
- Do not apply to blue spruce (*Picea pungens*).
- Do not apply to forests.

Read **LIMITATION WARRANTY AND DISCLAIMER** in the label booklet for PREVIA before using.
