

## SUPPLEMENTAL LABELING

This supplemental label expires on March 31, 2026 and must not be used or distributed after this date.

READ THE ENTIRE LABEL FOR ROUNDUP POWERMAX® II HERBICIDE BEFORE PROCEEDING WITH THE USE DIRECTIONS CONTAINED IN THIS SUPPLEMENTAL LABELING.

EPA Reg. No. 524-537

---

### USE WITH GT27™ SOYBEAN

---

Keep out of reach of children

## CAUTION

In case of an emergency involving this product, call collect, day or night, 1-800-334-7577.

---

### DIRECTIONS FOR USE

---

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

This label must be in the possession of the user at the time of herbicide application.

Read the label affixed to the Roundup PowerMAX® II Herbicide container of before applying.

Use of Roundup PowerMAX® II Herbicide according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the Roundup PowerMAX® II Herbicide container.

AVOID CONTACT OF THIS HERBICIDE WITH FOLIAGE, GREEN STEMS, EXPOSED NON-WOODY ROOTS OR FRUIT OF CROPS, EXCEPT AS DIRECTED FOR USE ON ROUNDUP READY® AND OTHER GLYPHOSATE-TOLERANT CROPS, DESIRABLE PLANTS AND TREES, AS SEVERE PLANT INJURY OR DESTRUCTION COULD RESULT.

See "PRODUCT INFORMATION" and "MIXING" sections of the Roundup PowerMAX® II Herbicide labeling for essential product information.

---

TYPES OF APPLICATION: Preplant; At-Planting; Preemergence; Postemergence (In-crop); Preharvest; Post-Harvest

Maximum Application Rates	
Combined total per year for all applications	5.3 quarts per acre
Total for all Preplant, At-Planting, Preemergence applications	3.3 quarts per acre
Total for all In-crop applications from cracking through flowering (R2 stage soybean)	64 fluid ounces per acre
Maximum Preharvest application rate	22 fluid ounces per acre

### **Preplant, At-Planting, Preemergence**

USE INSTRUCTIONS: This product may be applied before, during or after planting GT27 soybean.

TANK MIXTURES: This product may be tank-mixed with 2,4-D and applied prior to planting only. This product may be tank-mixed with one or more products containing the active ingredients listed below and applied prior to crop emergence. Refer to the individual label of all products used in the tank mixture for approved uses and application rates. Read and follow all label directions. It is the responsibility of the pesticide user to ensure that the intended use is included on the label of all products added to a tank mixture. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

---

acetochlor; carfentrazone-ethyl; chlorimuron ethyl; clethodim; clomazone; cloransulam-methyl; dimethenamid; dimethenamid-p; fluazifop-p-butyl; flufenacet; flumetsulam; flumiclorac pentyl ester; flumioxazin; fluthiacet-methyl; fomesafen; imazaquin; imazethapyr; lactofen; linuron; metolachlor; s-metolachlor; metribuzin; pendimethalin; pyroxasulfone; saflufenilic; quizalofop-p-ethyl; saflufenilic; sulfentrazone; thifensulfuron; tribenuron methyl; trifluralin

---

RESTRICTIONS: Maximum quantity of this product that may be applied for all preplant, at-planting and preemergence applications combined is 3.3 quarts per acre per season.

### **Postemergence (In-crop)**

USE INSTRUCTIONS: This product may be used to control annual grasses and broadleaf weeds in GT27 soybean from emergence (cracking) through flowering (R2 stage soybean). R2 stage soybean ends when a pod 5 millimeters (3/16 inch) long appears at one of the four uppermost nodes on the main stem with a fully developed leaf (R3 stage). Refer to the "ANNUAL WEEDS RATE SECTION" of the Roundup PowerMAX® II Herbicide label for application rates for specific annual weeds.

An initial application of 22 fluid ounces of this product per acre will control or suppress most 2 to 8-inch tall weeds, which are normally found approximately 2 to 5 weeks after planting. If the initial application is delayed and weeds are larger, apply a higher rate of this product. This product may be applied up to 44 fluid ounces per acre as a single, in-crop application for control of annual weeds and where dense weed populations exist.

Application of 22 to 44 fluid ounces of this product per acre (single or multiple applications) will control or suppress perennial weeds, including bermudagrass, Canada thistle, common milkweed, field bindweed, hemp dogbane, horsenettle, maretail (horseweed), nutsedge, quackgrass, rhizome johnsongrass, redvine, trumpetcreeper, swamp smartweed and wirestem muhly. For enhanced results, allow perennial weed species to achieve at least 6 inches of growth before applying this product.

Under adverse growing conditions, including drought, hail or wind damage, or a poor soybean stand that slows or delays canopy closure, a sequential application of this product might be necessary to control late flushes of weeds. IN THE SOUTHERN STATES, A SEQUENTIAL APPLICATION OF THIS PRODUCT WILL BE REQUIRED TO CONTROL NEW FLUSHES OF WEEDS IN THE GT27 SOYBEAN CROP. To control giant ragweed, apply 22 fluid ounces of this product per acre when the weed is 8 to 12 inches tall to increase control and possibly avoid the need for a sequential application.

PRECAUTIONS: In-crop applications made alone or with the addition of other crop chemical products could result in a crop response. Contact your seed trait provider for more information.

**RESTRICTIONS:** The combined total application of this product from crop emergence through harvest must not exceed 64 fluid ounces per acre. The maximum rate for any single in-crop application is 44 fluid ounces per acre. The maximum combined total amount of this product that may be applied during flowering (R2 stage soybean) is 44 fluid ounces per acre.

#### **Preharvest**

**USE INSTRUCTIONS:** Up to 22 fluid ounces of this product per acre may be applied to GT27 soybean for weed control prior to harvest after pods have set and lost all green color. Take care to avoid excessive seed shatter loss due to ground application equipment.

**RESTRICTIONS:** Allow a minimum of 14 days between application and harvest of soybean grain or feeding of soybean grain, forage or hay.

#### **Post-Harvest**

**USE INSTRUCTIONS:** This product may be applied for weed control after harvest of GT27 soybean. Higher rates might be needed for control of large weeds that were growing in the field at the time of harvest.

**RESTRICTIONS:** Application of this product must be made a minimum of 30 days prior to the planting of any crop not listed on this label.

---

Read the "Limit of Warranty and Liability" on the Roundup PowerMAX® II Herbicide product labeling before using. These terms apply to this supplemental labeling. If these terms are not acceptable, return the product unopened at once.
