Grazon* P+D

EPA Reg. No. 62719-182

Special 2(ee) Recommendation [†]
For Distribution and Use Only in the State of Oklahoma

Suppression of Seedling and Regrowth Mesquite in CRP, Rangeland and Permanent Pastures

ATTENTION

- [†] This recommendation is permitted under Section 2(ee) and has not been submitted to or approved by the EPA or state lead agency regulating pesticides.
- Read the label affixed to the container for Grazon* P+D herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Except as described in this product bulletin, use of Grazon P+D according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the product container.

Directions for Use

Grazon* P+D herbicide may be applied as a broadcast foliar spray at 1.5 to 3.0 pints per acre for suppression of seedling and regrowth mesquite plants. Apply Grazon P+D when soil moisture and temperatures are favorable for plant growth and after the foliage from new seasonal growth on mesquite plants has fully expanded and changed from a light green to dark green color. Use highest rate in rate range where the density or height of woody plants is greater or when growth conditions are less than optimal.
