

Recommendation

Manzate Max Fungicide EPA Reg. No. 70506-194

Special 2(ee) Recommendation
(For Distribution and Use in the State of California)

Addition of any EPA registered bactericide as tank mix partner in walnuts.

ATTENTION

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

- It is a violation of federal law to use this product in a manner inconsistent with its labeling
- Read the label affixed to the container for Manzate Max fungicide before applying. Carefully follow all precautionary statements and applicable use directions except as specified below.
- Use of Manzate Max according to this Section 2(ee) recommendation is subject to all precautions and limitations imposed by the label affixed to the container for Manzate Max.

Directions for Use

Crop	Diseases Controlled	Rate of Manzate Max Per Application (Qts/Acre)	Directions for Use	Restrictions/Comments
Walnut	Walnut Blight (<i>Xanthomonas campestris</i> pv. <i>Juglandis</i>)	1.8 qts/A (1.8 lbs ai/A)	Apply by ground in a minimum of 100 gallons water per acre, or by air in a minimum of 10 gallons water per acre. Begin applications at early pre-bloom prior to or when catkins are partially expanded. Make additional applications during bloom and early nutlet state, or as needed if frequent rainfall occurs.	Do not apply through any irrigation system. The reapplication interval is 7 to 10 days. Do not make more than 10 applications per season. Do not apply more than 18 qts. product (18 lbs ai) per acre per use season. For aerial applications only; Mixers/loaders must wear a particulate respirator with an N, R, or P filter, NIOSH approval prefix TC-84A. This product must be tank-mixed with a fixed copper product (such as Cuprofix Ultra 40 Disperss, EPA Reg. No. 70506-201) or a bactericide which is registered for use on walnuts. Pre-harvest Interval: Do not apply within 75 days before harvest.
