DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This 24(c) SLN label and the federal label for this product must be in the possession of the user at the time of pesticide application.

Follow all applicable directions, restrictions and precautions on this label and the main EPA-registered label.

PRODUCT APPLICATION RATES

The maximum single application rate is 3 lb ai/A, unless nematodes are present. Following a positive test, the maximum single application rate for controlling nematodes is 6 lb ai/A.

| | | RATE OF MOCAP EC | | |
|----------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CROP | PEST | BANDED (fl oz/1000 row feet) | BROADCAST (Quarts per acre) | APPLICATION DIRECTIONS |
| Easter lilies grown for commercial bulb production | Nematodes (Including <i>Pratylenchus penetrans</i> and <i>Pratylenchus crenatus</i>) | 2.4 – 6.9 | 2.0 (3 lbs.ai/A) | Apply Mocap EC Nematicide-Insecticide as a low-pressure (below 30 PSI) spray over the planted bulbs in the furrow. Mocap Nematicide-Insecticide should be diluted in 20 or more gallons of water per acre to achieve good coverage. Immediately cover treated area with 2-4 inches of soil. For best results final hilling of treated bulbs should be done as soon as possible. |

When using rates > 3 lbs ai/A, product may be applied only to 1/3 of the field at a time in a banded application (The band width must be no more than 1/3 of the row spacing).

Banded application rates >3.0 lb ai/A

Due to the lack of thresholds available for lilies, a positive soil test for nematodes within 8 months prior to the application is needed in order to use Mocap EC at maximum rates. Growers should use an integrated approach using available cultural, chemical, biological controls as well as surveillance and monitoring of nematode populations, in addition to establishing contact with local research experts in this area of production.

RESTRICTIONS AND PRECAUTIONS

- Do not make more than one application to the same field per crop season.
- For application only by motorized ground boom equipment. Do not apply with liquid backpack sprayers, low-pressure handwand liquid equipment, sprinkler cans or hand-held measuring containers, or by hand-dipping of Lily bulbs. Do not apply by air or through irrigation systems. Do not apply by any method of application not stated on this 24(c) SLN label.
- To protect endangered avian species, do not use the product in areas of known species occurrence and during the breeding season in those areas.
- Applicators are required to use coarse or ultra-coarse spray as described according to ASABE S572.1 definition for standard nozzles.

Spray Zone Restriction

To mitigate risks to fish and aquatic organisms, a 140-ft. buffer must be maintained around streams, ponds, lakes, river, springs, swamps, bogs, marshes, or irrigation canals containing water year-round when making applications of MOCAP EC under this registration.

Do not allow spray to drift from the application site and contact people, structures people occupy at any time and the associated property, parks, and recreation areas, non-target crops, aquatic and wetland areas, woodlands, pastures, rangelands or animals.

- Do not apply within 25 feet of residential areas.
- Do not release spray at a height greater than 20 inches above the ground.
