

FORGE[®] SP

BENEFICIAL STREPTOMYCES

CONTAINS NON-PLANT FOOD INGREDIENT

Streptomyces nigrescens strain MR541* 1X 10⁷ cfu/gr

Information regarding the contents and levels of metals in this product is available on the Internet at <http://www.aapfco.org/metals.htm>

Intended Uses: Forge SP is a high concentration of a unique beneficial microorganism that naturally chelates iron, making it more available to some plants.

APPLICATION DIRECTIONS:

Compatibility:

Forge SP can be tank mixed and dry mixed with all chemical fungicides, insecticides, and fertilizers unless otherwise restricted. Do not apply soil fumigants to the areas treated with Forge SP.

Application Timing:

Apply Forge SP throughout the growing season from early spring to late fall.

Note: Since Forge SP contains live spores of a microbe, best results will be obtained by applying when temperatures can support microbial growth. Forge SP becomes active in soil or on the plant foliage when the daytime temperatures are above 55° F and is not effective when temperatures remain cold.

Soil Drench: Use 4-6 oz of Forge SP in 100 gallons of water to create solution. Apply solution as a drench to plants/growing until soil is saturated just prior to run-off.

Soil Incorporation: Mix or spray evenly into soil at a rate of 1.5-oz per cubic yard of soil.

Hydroponics systems: Use 3-12 oz per 100 gallons of water. Reapply every time water is changed.

Foliar Spray: Apply 6-12 oz Forge SP per acre. Dissolve Forge SP in 50-100 gallons of water and apply to foliage and blossoms every 7 to 14 days. Spray wet to run-off

For smaller quantities: Use 1 teaspoon of Forge SP/gal of water as a dilution and apply as above.

Forge SP can be applied using hand-held backpack or ground spray equipment. Clean application equipment before use of this product and use prepared sprays within 4 hours of preparation. For best results, use a non-ionic spreader-sticker in conjunction with application. Consult manufacturer or sales representative for specific suggestions.

OUTDOOR AGRICULTURE PRODUCTION

Soil Treatment At Planting:

Use at planting, in-furrow, seeding, or transplant. Apply 1-12 oz. of Forge SP in 10-200 gallons of water per acre. Refer to the "Crops On Which Forge SP May Be Used" section for crop-specific application rates.

Soil Treatment Through Irrigation:

Forge SP may be used in drip, overhead, or other irrigation systems at any stage of plant growth as a soil treatment. Apply 1-12 oz. of Forge SP in 10-200 gallons of water per acre.

Seed Treatment:

Seed Spray or Slurry Coating: Apply this product through mist-type commercial seed treatment equipment, slurry or other comparable methods that provide thorough coverage of treated seed. Prior to planting, dissolve 1-6 oz. of Forge SP in 1-4 oz of water per cwt of seed and spray directly on seed.

Hopper Box Dry Coating: Apply directly to seed as a dry coating at a rate of 1-6 oz per cwt of seed. Apply as to insure even coating on seeds.

Foliar Treatment:

Use 3-12 oz of Forge SP in 10-150 gallons of water per acre. Apply initial application as early in the season as possible.

Reapply every 7-21 days depending on desired results and environmental conditions.

Forge SP can be used in all types of spray equipment including aerial applications.
