## Admire® PRO Systemic Protectant

EPA Reg. No. 264-827

Dry Bulk Fertilizer

# PRODUCT BULLETIN

## **FOR DISTRIBUTION AND USE ONLY IN THE STATES OF MICHIGAN, MINNESOTA AND WISCONSIN**

**FIFRA Section 2(ee) Recommendation:** This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or accepted by the U.S. Environmental Protection Agency. It is a violation of federal law to use this product in a manner inconsistent with its label. This product bulletin must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

### **DIRECTIONS FOR USE**

It is a violation of Federal law to use this product inconsistent with its labeling.

#### **Commercial Impregnation Of Admire Pro On Dry Bulk Fertilizer**

Dry bulk fertilizer may be impregnated or coated with ADMIRE PRO for application to potatoes. All recommendations, cautions, and special precautions on the label must be followed, along with State regulations relating to dry bulk fertilizer blending, impregnating and labeling.

**IMPREGNATION:** To impregnate, use a system consisting of a belt, conveyor, or closed drum which is used for dry bulk fertilizer blending. Any commonly used fertilizer can be impregnated with ADMIRE PRO except ammonium nitrate, or fertilizers containing ammonium nitrate, potassium nitrate, or sodium nitrate. Do not use on powdered limestone.

Apply using a minimum of 400 pounds of dry bulk fertilizer per acre and up to a maximum of 1200 pounds per acre. To impregnate or coat the dry bulk fertilizer, mix ADMIRE PRO with sufficient carrier to form a sprayable solution. The delivery nozzles must be directed to deliver a fine spray toward the fertilizer for thorough coverage while avoiding contact with mixing equipment. Uniform impregnation of ADMIRE PRO to dry bulk fertilizer will vary, and if the absorptivity is not adequate, an absorptive powder may be added to the mixture. (Micro-Cel E is a recommended absorbent powder).

Apply immediately after impregnation unless experience has shown that impregnated fertilizer can be stored without becoming lumpy and difficult to spread.

**RATES:** Select the recommended rate of ADMIRE PRO per acre from the appropriate section of the label and refer to the formula below to determine the amount of ADMIRE PRO which is to be impregnated on a ton of dry bulk fertilizer based on the amount of fertilizer which will be distributed on one acre.

$$\frac{(\text{fluid ounces of ADMIRE PRO}) \times (2000)}{\text{Fertilizer per Acre rate in pounds}} = \text{fluid ounces of ADMIRE PRO per ton of fertilizer}$$

**APPLICATION:** Uniform application is essential for satisfactory insect control. Accurate calibration of fertilizer equipment is essential for uniform distribution to the soil. If fertilizer materials are excessively dusty, use diesel oil or other approved additive to reduce dust prior to impregnation as dusty fertilizer will result in poor distribution during application. Poor insect control may occur where the impregnated fertilizer is not uniformly applied.

Applications of ADMIRE PRO impregnated fertilizer should not be made broadcast due to the possible diminished efficacy of ADMIRE PRO. See placement recommendations on Federal label.

**INCORPORATION AND COMBINATION USES:** When ADMIRE PRO is to be used in combination with another insecticide, follow directions on the label for combinations, rates, crops, incorporation, and special precautions.
