Application may be made by ground or air. Minimum recommended spray volumes are 15 gallons per acre for aerial applications and 100 gallons per acre for ground applications. Use the highest labeled rate by air.

Apply PROCURE 480SC in sufficient spray volume for thorough coverage. Tank mixing the lowest labeled rate of a spray surfactant with PROCURE 480SC may improve spray coverage and penetration. Ground application is preferred.

Hazelnuts (Filberts)	Eastern Filbert Blight (<i>Anisogramma anomala</i>)	4 to 6	PROCURE 480SC should be applied at budbreak (when the first green tissue is visible) as a preventative spray. Continue applications of PROCURE 480SC at 10 to 14 day intervals if weather conditions are conducive to disease development. Use shorter spray intervals during bud break and rapid shoot elongation. The expanding shoot tip must be protected. Apply the high rate to varieties that are highly susceptible to the indicated disease or when severe disease conditions exist. Do not apply more than 24 fl. oz. of PROCURE 480SC per acre per season. Do not apply within 18 days of harvest.
