Product Information

Prowl H2O is a selective preemergence herbicide for controlling most annual grass weeds and certain broadleaf weeds as they germinate. Refer to the Prowl H2O container label for a complete list of weeds controlled.

Prowl H2O is most effective when mechanically incorporated, or when incorporated in the weed germination zone by rainfall or irrigation.

Application Instructions

Uniformly apply Prowl H2O in 10 or more gallons of water per acre with ground equipment.

Use Methods, Timings, and Rates

Apply Prowl H2O to established clover grown for seed production. Uniformly apply Prowl H2O at a broadcast rate of 1.0 to 4.0 quarts per acre at optimum application timing for dodder control or other weed control before weed germination. For optimum dodder control, apply 3.0 to 4.0 quarts of Prowl H2O per acre.

Apply Prowl H2O before clover exceeds 6 inches in height.

Restrictions and Limitations

- DO NOT exceed 4.0 quarts of Prowl H2O per acre per year.
