#### GENERAL INFORMATION

**Stay-N™** is a nitrogen management aid that helps control the loss of nitrogen from volatilization, denitrification and leaching. **Stay-N** is formulated to use with Urea, UAN solutions and animal waste. **Stay-N** is intended to be used as a supplement to a regular fertilizer program and may not, by itself, provide all nutrients required by crops and other plants. **Urea:** **Stay-N** may be used to treat dry urea prior to application to the field. Application of urea to the field is recommended soon after treatment to provide the best results. In high temperatures and humid conditions, urea will become wet. Urea treated with **Stay-N** may result in the fertilizer material becoming sticky. Should these conditions occur during mixing and application, a small amount of drying agent may be added to the blending process. When other fertilizer materials are added to the blend such as phosphate or potash, a drying agent will not be needed. **Liquid Fertilizers:** **Stay-N** may be mixed with liquid fertilizers such as aqua ammonia or other liquid ammoniacal or urea nitrogen fertilizers. Liquid fertilizers containing high levels of phosphates should not be used with **Stay-N**. Conduct a jar test if compatibility is questionable. Always read and follow provided mixing and application directions.
