## SPLIT APPLICATION FOR CONTROL OF WHITEFLY IN VEGETATIVE COTTON

This label for Knack® Insect Growth Regulator expires and must not be distributed or used in accordance with this SLN registration after December 31, 2027.

### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Follow all applicable directions, restrictions, worker protection standard requirements and precautions on the EPA registered label. This labeling must be in the possession of the user at the time of application.

Product	Rate & Timing
Knack® Insect Growth Regulator	5.0 fl oz/A (followed by) 5.0 fl oz/A
	<b>Timing:</b> Apply first application when whitefly populations are starting to build, then make second application 14 days later.
<b>Vegetative Cotton:</b> For vegetative (growing) cotton, it is critical the first application be made in a timely manner, prior to exponential population growth. A timely first application will keep populations low while a second application will maintain low populations while protecting new growth. Initiate first spray when 5 <sup>th</sup> leaf below the terminal averages 3-5 adults and at least one large nymph per sample. If adult populations are higher, add an adulticide for knockdown.	
<b>Non-Vegetative Cotton:</b> If cotton growth is no longer vegetative or “cut out”, make one application of Knack at 8 to 10 fl oz/A, again when populations are low. Add an adulticide for knockdown.	

### Use Restrictions

- Always read and follow all label directions when using any pesticide alone or in tank mix combinations. The most restrictive labeling applies when using a tank mix.
- Do not apply more than 10 fl oz/A of Knack per season.
- Do not apply within 28 days of harvest.
- Refer to labels for additional restrictions and use directions.
