

Supplemental Label

TEBUZOL™ 3.6F Fungicide (EPA Reg. No. 70506-114)

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
Follow all applicable directions, restrictions and precautions on the federally-registered label.

This Supplemental Label contains new or supplemental instructions for use of this product which do not appear on the package label. Follow the instructions carefully. This label must be in the possession of the user at the time of pesticide application.

APPLICATION DIRECTIONS

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Asparagus	Rust (<i>Puccinia</i> spp.)	4 to 6 fl. oz. per acre
	Notes: Apply TEBUZOL 3.6F as a foliar spray to the developing ferns after harvest of spears is completed. Apply at the earliest sign of rust pustules or when weather conditions are conducive for rust development. Apply 4 to 6 fl. oz. of TEBUZOL 3.6F per acre (0.11 lbs. a.i. – 0.17 lbs. a.i. per acre) in alternation with another effective fungicide. Under conditions of severe rust pressure, use the higher rate. Repeat applications on a 14-day interval as necessary to maintain control of rust. Do not apply to harvestable spears. Do not apply within 100 days of harvest in California and 180 days in all other states. Do not make more than three foliar applications per season (18 fl. oz./acre or 0.51 lbs. a.i./acre).	
General Comments: Applications may be made using ground or aerial application equipment. A 50 foot spray drift buffer zone is required for all aerial applications. For optimum disease control, the lowest labeled rate of spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F is a sterol demethylation inhibitor (DMI) fungicide (Group3). Alternating TEBUZOL 3.6F with other DMI fungicides may lead to resistance. Restricted-entry interval (REI) = 12 hours		

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Barley	Rust (<i>Puccinia</i> spp.) Head Blight (<i>Fusarium</i> spp.) - Suppression	4 fl. oz. per acre
<p>Notes: Apply TEBUZOL 3.6F in a minimum of 10 gallons of spray solution per acre by ground or in a minimum of 5 gallons of spray solution per acre by air. A maximum of 4 fl. oz. of TEBUZOL 3.6F may be applied per acre per crop season. Do not apply within 30 days of harvest. Straw cut after harvest may be fed or used for bedding. Grazing livestock or feeding of green forage is permitted 6 or more days after the last application of TEBUZOL 3.6F. Barley fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development.</p> <p>Application timing directions: Rusts: Apply TEBUZOL 3.6F at the earliest sign of rust pustules on foliage. Fusarium head blight: Optimal timing of TEBUZOL 3.6F for Fusarium Head Blight suppression is when stem heads have fully emerged (Feekes 10.5) on 50% of the plants.</p>		
<p>General Comments: For optimum disease control, the lowest specified rate of a spray surfactant should be tank mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours</p>		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Beans (fresh & dry except succulent shelled)	Rust (<i>Uromyces appendiculatus</i>)	4 to 6 fl. oz. per acre
<p>Notes: Apply TEBUZOL 3.6F in a protective spray schedule or when weather conditions are favorable for rust development. Repeat applications at 14-day intervals, or as necessary to maintain control. Beans, fresh: TEBUZOL 3.6F may be applied up to 7 days before harvest. Do not apply more than 24 fl. oz. of TEBUZOL 3.6F per acre per crop season. Beans, dry: TEBUZOL 3.6F may be applied up to 14 days before harvest. Do not apply more than 12 fl. oz. of TEBUZOL 3.6F per acre per crop season.</p>		
<p>General Comments: For optimum disease control, the lowest specified rate of a spray surfactant should be tank mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on bean foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours</p>		

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Corn (sweet corn, field corn, field corn grown for seed, and popcorn)	Rust (<i>Puccinia</i> spp.)	4 to 6 fl. oz. per acre
	Northern leaf blight (<i>Helminthosporium turcicum</i>)	
	Southern leaf blight (<i>Helminthosporium maydis</i>)	
	Northern leaf spot (<i>Helminthosporium carbonum</i>)	
	Gray leaf spot (<i>Cercospora zea-maydis</i>)	
Notes: Apply TEBUZOL 3.6F in a protective spray schedule or when weather conditions are favorable for disease development. Repeat applications at 7- to 14-day intervals, or as necessary to maintain control. A maximum of 24 fl. oz. (1.5 pint) of TEBUZOL 3.6F may be applied per acre per crop season. Sweet corn: TEBUZOL 3.6F may be applied up to 7 days before harvest of ears or forage and 49 days before the harvest of fodder. Field, seed or popcorn: TEBUZOL 3.6F may be applied up to 21 days before harvest of forage and 36 days before the harvest of grain or fodder.		
General Comments: For optimum disease control, the lowest specified rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on corn foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) for sweet corn = 19 days. Restricted-entry interval (REI) for all corn except sweet corn = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Cotton	Southwestern cotton rust (<i>Puccinia cacabata</i>)	6 to 8 fl. oz. per acre
	Notes: Apply TEBUZOL 3.6F in a protective spray schedule or when weather conditions are favorable for rust development. Repeat applications at 7- to 14-day intervals, or as necessary to maintain control. TEBUZOL 3.6F may be applied up to 30 days before harvest. Do not apply more than 24 fl. oz. of TEBUZOL 3.6F per acre per crop season.	
General Comments: For optimum disease control, the lowest specified rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on cotton foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours		

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Cucurbit Vegetables Group Chayote Chinese waxgourd Citron melon Cucumber Gherkin	Powdery mildew (<i>Sphaerotheca fuliginea</i> / <i>Podosphaera xanthii</i>) (<i>Erysiphe cichoracearum</i>)	4 to 6 fl. oz. per acre
Edible gourd (includes hyotan, cucuzza, hechima and Chinese okra) Momordica spp. (includes balsam apple, balsam pear, bitter melon and Chinese cucumber) Muskmelon (includes cantaloupe, casaba, crenshaw melon, golden pershaw melon, honeydew melon, honey balls, mango melon, Persian melon, pineapple melon, Santa Claus melon and snake melon) Pumpkin Summer squash (includes crookneck squash, scallop squash, straightneck squash, vegetable marrow and zucchini) Winter squash (includes butternut squash, calabaza, hubbard squash, acorn squash and spaghetti squash) Watermelon	Gummy stem blight – suppression (<i>Didymella bryonae</i>) (watermelon, squash, pumpkin and melons only)	8 fl. oz. per acre
Notes: Apply the specified dosage in a protective spray schedule to foliage and fruit. Repeat applications at 10- to 14-day intervals. TEBUZOL 3.6F may be applied up to 7 days before harvest. Do not apply more than 24 fl. oz. of TEBUZOL 3.6F per acre per crop season.		
General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Dry bulb onion Garlic Great-headed	White rot (<i>Sclerotium cepivorum</i>)	White rot: 20.5 fl. oz. per acre applied in a 4 to 6 inch band over/into each furrow. May be applied by chemigation to control white rot.

(elephant) garlic Welch Onion Shallot	Rust (<i>Puccinia allii</i> , <i>Puccinia porri</i>)	4 to 6 fl. oz. per acre
	Purple blotch (<i>Alternaria porri</i>)	
	White rot: For the control of white rot, make one application in the furrow at the time of planting. The in-furrow application should be made at the rate of 20.5 fl. oz. TEBUZOL 3.6F per acre. Apply the entire per acre rate in a 4 to 6 inch band over/into each furrow. Additional control may be obtained by including two foliar applications at 4 to 6 fl. oz./acre.	
	Rust: For the control of rust make foliar applications at the rate of 4 to 6 fl. oz. TEBUZOL 3.6F per acre per application. Repeat at 10- to 14- day intervals. Apply TEBUZOL 3.6F in a protective spray schedule or when weather conditions are favorable for rust development.	
Notes: Do not apply more than 32.5 fl. oz. TEBUZOL 3.6F per acre per season if an in-furrow treatment is made. If TEBUZOL 3.6F is not applied as an in-furrow treatment then do not apply more than 12 fl. oz. TEBUZOL 3.6F per acre per season as a foliar spray. Do not apply within 7 days of harvest.		
General Comments: For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest recommended rate of a spray surfactant may be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Green onion Leek Spring onion Scallion	White rot (<i>Sclerotium cepivorum</i>) Suppression only Rust (<i>Puccinia allii</i> , <i>Puccinia porri</i>) Purple blotch (<i>Alternaria porri</i>)	4 to 6 fl. oz. per acre
Japanese bunching onion Green shallots Green eschalots	For control of diseases make foliar applications using an interval of 10- to 14-days. Apply TEBUZOL 3.6F in a protective spray schedule or when weather conditions are favorable for rust development. Notes: Do not apply more than 24 fl. oz. of TEBUZOL 3.6F per acre per season. Do not apply within 7 days of harvest.	
General Comments: For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest recommended rate of a spray surfactant may be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours		

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Hops	Powdery mildew (<i>Sphaerotheca humuli</i> / <i>Sphaerotheca macularis</i>)	4 to 8 fl. oz. per acre
	Notes: Apply the specified dosage in a protective spray schedule to foliage. Repeat applications at 10- to 14-day intervals. TEBUZOL 3.6F may be applied up to 14 days before harvest. Do not apply more than 32 fl. oz. of TEBUZOL 3.6F per acre per crop season. Increase the spray volume and the application rate as vine growth increases during the season.	
General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Leafy Brassica Greens Broccoli raab Chinese cabbage (bok choy) Collards Kale Mizuma Mustard greens Mustard spinach Rape greens Turnip greens	Cercospora leaf spot (<i>Cercospora brassicicola</i>)	3 to 4 fl. oz. per acre
	Powdery mildew (<i>Erysiphe cruciferarum</i>)	
	Alternaria leaf spot (<i>Alternaria brassicicola</i>)	
	Notes: Do not apply more than 16 fl. oz. of TEBUZOL 3.6F per ace per season. Do not apply more often than once every 10 days. Do not apply within 7 days of harvest.	
General Comments: For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest recommended rate of a spray surfactant may be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restriction: Application to turnip greens is limited to East of the Rockies. Restricted-entry interval (REI) = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Garden beet, roots and tops (leaves)	Cercospora leaf spot (<i>Cercospora beticola</i>)	3 to 7.2 fl. oz. per acre
	Notes: Make applications on 14-day intervals. Do not apply more than 28.8 fl. oz. of TEBUZOL 3.6F per ace per season. Do not apply within 7 days of harvest.	

General Comments: For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest labeled rate of a spray surfactant may be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
Restricted-entry interval (REI) = 12 hours.

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Lychee	Anthracnose (<i>Colletotrichum gloeosporioides</i>)	4 to 6 fl. oz. per acre
	Notes: Begin first application of TEBUZOL 3.6F as panicle emerges. Spray up to 6 fl. oz. per acre every 10 days thereafter for a total of 8 sprays. Apply specified dosage in a minimum of 50 gallons of spray solution per acre by ground only. Do not apply more than 48 fl. oz. of TEBUZOL 3.6F per acre per season. TEBUZOL 3.6F can be applied up to and including the day of harvest (PHI = 0 days).	

General Comments: For optimum disease control, the lowest labeled rate of a non-ionic spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
Restricted-entry interval (REI) = 2 days

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Okra	Cercospora leaf spot (<i>Cercospora</i> spp.)	4 to 6 fl. oz. per acre
	Notes: Apply specific dosage of TEBUZOL 3.6F in a preventative spray program. Use the highest rate when disease conditions are favorable and in areas where high disease pressure is expected. Applications may be repeated at 14-day intervals in order to maintain control of the disease. Apply specified dosage as a foliar spray in a minimum of 20 gallons of spray solution per acre by ground or a minimum of 5 gallons of spray solution by air. Applications may be made no closer than 3 days before harvest. Do not apply more than 24 fl. oz. of TEBUZOL 3.6F per acre per season.	

General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
Restricted-entry interval (REI) = 12 hours

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Pecan	Brown leaf spot (<i>Sirosporium diffusum</i>) Downy spot (<i>Mycosphaerella caryigena</i>) Liver spot (<i>Gnomonia caryae</i>) Scab (<i>Cladosporium caryigenum</i>) Vein spot (<i>Gnomonia nerviseda</i>)	4 to 8 fl. oz. per acre

	Zonate leaf spot (<i>Grovesinia pyramidalis</i>)	
Notes: Apply TEBUZOL 3.6F in a preventative spray schedule beginning at early bud break (young leaves unfolding) and continue applications at 10- to 14-day intervals through the pollination period. TEBUZOL 3.6F should be applied at 4 fl. oz. per acre in a tank-mix with the recommended rate of Super-Tin® in cover sprays. Follow label directions for Super-Tin®. Do not add a surfactant to the spray solution when using Super-Tin®. Apply TEBUZOL 3.6F in a spray volume of 15 or more gallons per acre by air or 50 or more gallons per acre by ground. Apply 7 to 8 fl. oz. per acre of TEBUZOL 3.6F to full-size mature trees and 4 to 6 fl. oz. per acre of TEBUZOL 3.6F to smaller trees. Apply the high rate to varieties that are highly susceptible to the indicated diseases. Do not apply after shucks begin to split. A maximum of 32 fl. oz. of TEBUZOL 3.6F may be applied per acre per crop season. Do not cut cover crops in treated areas for feed or allow livestock to graze treated areas.		
General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). It may be applied in tank-mix or alternated (every other spray application) with a non-DMI fungicide as a resistance management strategy. Restricted-entry interval (REI) = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Soybean	Rust (<i>Phakopsora pachyrhizi</i>) Powdery mildew (<i>Microsphaera diffusa</i>)	3 to 4 fl. oz. per acre
Use Directions: Apply TEBUZOL 3.6F as a broadcast foliar spray as a preventative spray or at first visible symptoms of disease. Repeat applications on a 10- to 14-day spray interval if environmental conditions are favorable for continued disease development. Use of higher rates and shorter spray intervals are recommended when disease pressure is severe. The lowest label recommended rate of a spray surfactant must be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F should be applied in a minimum of 10 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons per acre by aircraft spray equipment. Restrictions: Applications may not be made within 21 days of harvest. Do not apply more than 3 applications per season. Do not apply more than 12 fl. oz. per acre per use season. Restricted-entry interval = 12 hours		
CROP	DISEASE	RATE OF TEBUZOL 3.6F
Sunflower	Rust (<i>Puccinia helianthi</i>)	4 to 6 fl. oz. per acre
	Notes: Apply specific dosage of TEBUZOL 3.6F at the earliest sign of infection (rust pustules developing) or when weather conditions are favorable for rust development. Apply higher rate to highly susceptible varieties and/or under severe disease conditions. Application may be repeated at 14 days if necessary to maintain control of the disease. Apply specified dosage in a minimum of 20 gallons spray solution per acre by ground or a minimum of 5 gallons of spray solution by air. Do not apply more than 16 fl. oz. of TEBUZOL 3.6F per acre per season or within 50 days of harvest.	
General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. Contact your state Extension Service or UPI representative for a list of approved surfactants. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of		

time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).

Restricted-entry interval (REI) = 12 hours

CROP	DISEASE	RATE OF TEBUZOL 3.6F
Turnip (Application is limited to East of the Rockies)	Cercospora leaf spot (<i>Cercospora brassicicola</i>)	4 to 7.2 fl. oz. per acre
	Notes: Apply the specific dosage in a protective spray schedule to foliage. Repeat applications at 12- to 14-day intervals. TEBUZOL 3.6F may be applied up to 7 days before harvest. Do not apply more than 28.8 fl. oz. of TEBUZOL 3.6F per acre per crop season.	

General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).

Restricted-entry interval (REI) = 12 hours

CROP	DISEASE	RATE OF TEBUZOL 3.6F	INSTRUCTIONS
Wheat	Rusts leaf, stem and stripe (<i>Puccinia</i> spp.)	4 fl. oz. per acre	For control of Rust apply TEBUZOL 3.6F at the earliest sign of rust pustules on foliage.
	Head blight or scab * (<i>Fusarium</i> spp.) – Suppression only		For Fusarium Head Blight suppression, apply at the beginning of flowering on main stem heads (Feekes 10.51).
	Septoria Glume Blotch * (<i>Stagonospora nodorum</i>)		For control of Septoria Glume Blotch, apply when at least 75% of wheat heads on the main stem are fully emerged to when 50% of the heads on the main stem are in flower.
	Tan Spot * (<i>Pyrenophora tritici-repentis</i>), Septoria Leaf Spot * (<i>Septoria</i> complex: <i>Septoria tritici</i> , <i>Stagonospora nodorum</i>)	2 to 4 fl. oz. per acre	Apply Tebuzol 3.6F to leaf foliage as a preventive treatment or at the first sign of disease development up to the end of flowering. The low rate of Tebuzol can be used early in the season for Tan Spot and Septoria Leaf Spot but an additional application of Tebuzol 3.6F (Note: maximum seasonal rate is 4 fl. oz.) or another labeled fungicide will generally be required to protect the flag leaf under conditions conducive to high disease pressure.
	Powdery Mildew * (<i>Erysiphe graminis</i> , <i>Blumeria graminis</i>)	4 fl. oz. per acre	Protect the flag leaf for maximum disease protection and yield. Tebuzol 3.6F applied immediately after flag leaf emergence generally provides the best results.

*** Not for this use in California.**

Notes: Wheat fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development. A maximum of 4 fl oz of TEBUZOL 3.6F may be applied per acre per crop season. Do not apply within 30 days of harvest (PHI = 30 days). Straw may be fed or used for bedding. Do not allow livestock to graze or feed green forage to livestock prior to 6 days after treatment with TEBUZOL 3.6F. Apply TEBUZOL 3.6F in a minimum of 10 gallons of spray solution per acre by ground, or in a minimum of 5 gallons of spray solution per acre by air.

General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with TEBUZOL 3.6F. TEBUZOL 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, TEBUZOL 3.6F will be resistant to weathering. TEBUZOL 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
Restricted-entry interval (REI) = 12 hours

SEED TREATMENT – Corn (Sweet Corn, Field Corn, Field Corn Grown For Seed and Popcorn)
For control of soilborne and seedborne Fusarium and soilborne and Seedborne head smut.

SEED LABELING: To meet US Federal Seed Act requirements, all seed treated with TEBUZOL 3.6F must be labeled:

TREATED SEED. DO NOT USE FOR FOOD, FEED OR OIL PURPOSES.

Treated with Tebuconazole.

USE PRECAUTION: When using formulations that do not contain dye, to comply with 40 CFR 153.155, all seed treated with an economic poison must be colored with an EPA approved dye such as one of the dyes listed in 40 CFR Sections 180.910 and 180.920 to distinguish and prevent subsequent inadvertent use as a food for man or feed for animals.

DISEASE	RATE Fl. Oz./CWT	DIRECTIONS FOR USE
Soilborne and Seedborne Fusarium	0.071	Apply as a seed treatment using standard slurry or mist-type seed treatment equipment. Uniform application of seed is necessary to ensure seed safety and best disease protection. Seed should be sound and well cured prior to treatment. Product should be diluted with sufficient water to ensure complete seed coverage. Consult a seed treatment specialist regarding slurry rates recommended for the crop to be treated with TEBUZOL 3.6F. The length of control will vary depending on the rate used.
Soilborne and Seedborne Head smut (<i>Sphacelotheca reiliana</i>)	0.27 to 0.54	

EPA Approved 2/28/11
Rev. 6/27/11

United Phosphorus, Inc.
