Reglone® Desiccant

Preharvest Desiccation of Carrot, Coriander, Radish (other than Daikon), Spinach, Sugar Beet, Table Beet and Turnip Grown for Seed

EPA Reg. No. 100-1061
EPA SLN No. WA-040011

This SLN label for Reglone Desiccant expires and may be amended or cancelled before it expires. Do not distribute or use this SLN label after December 31, 2029, or after this SLN label is amended or cancelled, which event happens first.

DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This SLN label and the federal label for this product must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on this SLN label and on the EPA-registered label.

CROP / SITE

Apply only to carrot, coriander, radish (other than Daikon), spinach, sugar beet, table beet and turnip grown for seed for preharvest desiccation.

APPLICATION SITE

Apply 1.5 to 2 pts per acre Reglone Desiccant (0.38 to 0.5 lbs ai per acre) in 15 to 30 gal water by ground or 5 gal water by air. Make only one application per crop. Do not apply more than 2 pts (0.5 lb ai) per year.

APPLICATION TIMING

Apply 3 to 10 days before harvest prior to swathing when the majority of seed is harvest-ripe (spinach - tan to gray ripe). Do not use on Daikon variety of radish.

RESTRICTIONS / PRECAUTIONS

- Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.
- For use in accordance with the SLN label, **do not** apply this product through any type of irrigation system.
- When using this product in Eastern Washington, refer to WSDA restrictions on the use of desiccant herbicides.

- The pesticide should only be applied when the wind is blowing away from adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, and non-target crops).
- This pesticide is toxic to aquatic invertebrates. For terrestrial uses, do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Reglone Desiccant should not be used in accordance with this SLN label where impact on listed threatened or endangered species is likely.
- **Non-Target Organism Advisory:** This product is toxic to plants and may adversely impact the foliage and habitat on non-target organisms, including pollinators, in areas adjacent to the treated site. Protect the forage and habitat of non-target organisms by following label directions intended to minimize spray drift.

SEED CROP REQUIREMENTS

- All carrot, coriander, radish, spinach, sugar beet, table beet, and turnip seed screenings shall be disposed of in such a way that they cannot be distributed or used for human food or animal feed. The seed conditioner shall keep records of screening disposal for three years from the date of disposal and shall furnish the records to the director immediately upon request. Conditioner disposal records shall consist of documentation of on-farm disposal, disposal at a controlled dumpsite, incinerator, composter, or other equivalent disposal site and shall show the lot numbers, amount of material disposed of, its grower(s), and the date of disposal.
- No portion of the carrot, coriander, radish, spinach, table beet, sugar beet, or turnip seed plant, including but not limited to green chop, hay, pellets, meal, whole seed, cracked seed, roots, bulbs, leaves and seed screenings may be used or distributed for food or feed purposes.
- Carrot, coriander, radish, spinach, table beet, sugar beet, and turnip seed shall bear a tag or container label which forbids use of the seed for human consumption or animal feed.
- Carrot, coriander, radish, spinach, sugar beet, table beet, and turnip seed may not be distributed for human consumption or animal feed.

WSDA CONTAINER DISPOSAL GUIDANCE

Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA website under the Waste Pesticide Program. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
