## FIFRA Section 2(ee) Recommendation

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA.

FENPYROXIMATE | GROUP | 21A | INSECTICIDE

EPA Reg. No. 71711-57

Crop: Pistachio; Almond

Pest: Gill's mealybug (Ferrisia gilli)

State: California

## DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

This labeling and the EPA approved container label must be in the possession of the user at the time of application. Read the label affixed to the container for FujiMite® 20SC Miticide/Insecticide before applying. Use of FujiMite 20SC Miticide/Insecticide according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the container for FujiMite 20SC Miticide/Insecticide.

## For Control of Gill's Mealybug (Ferrisia gilli) in Pistachio and Almond

- Apply FujiMite 20SC Miticide/Insecticide at 7.45 to 11.2 fl oz (0.105 to 0.158 lb ai) per acre.
- Use the higher rate for heavy infestations.
- Apply by ground using 200 gallons of water per acre or an adequate spray volume to achieve complete spray coverage and to make direct contact with the insect.
- Apply FujiMite 20SC Miticide/Insecticide with a silicone, NIS, or mineral oil type spray adjuvant to aid in spray coverage.
- FujiMite 20SC Miticide/Insecticide is effective on all developmental stages including adults; however, application should be made at peak crawler emergence when mealybugs are exposed on the clusters and foliage, typically from early to mid-June in the first generation.
- A follow-up application may be made from late July to early August, targeting second generation crawler hatch.
- More than one application (limited to no more than 2 applications per year) may be necessary to achieve acceptable control.
- For best results, tractor speed should not exceed 2 mph.
