FIFRA §2(ee) RECOMMENDATION

HELMSTAR PLUS SC

EPA Reg. No. 74530-69

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements and precautions on the EPA registered label.
- This recommendation is made as permitted under FIFRA §2(ee) and has not been submitted to or approved by the EPA

HELMSTAR PLUS SC Crop-specific Requirements Minimum Time Product Rate per Maximum Product from Application to **Target Disease Application** Rate per Year Crop Harvest - Davs (fl oz/A) (fl oz/A) (PHI) **Almonds** Shot Hole 14.4 43.2 35 (Wilsonomyces carpophilus) Peach Rust (Tranzchelia discolor)

Instructions

Apply **HELMSTAR PLUS SC** beginning at pink bud. If the bloom period is extended and/or severe disease conditions exist, make a second application at full bloom. If conditions remain favorable for disease make another application at petal fall. Make applications on a 7-14 day interval. Begin applications when conditions are favorable for disease but before infection.

Apply **HELMSTAR PLUS SC** in a minimum spray volume of 15 gallons per acre by air or 50 gallons per acre by ground. Thorough and uniform coverage is essential for disease control. Reduced efficacy has been observed when uniform coverage cannot be obtained. Reduce the application interval for varieties that are highly susceptible to the indicated diseases or when severe disease conditions exist. The use of ground application after petal fall is preferred because of difficulty in penetrating the canopy and obtaining thorough coverage of the foliage and fruit by air.

For optimum disease control, tank mix **HELMSTAR PLUS SC** with the lowest specified rate of a spray adjuvant (non-ionic surfactant, crop oil concentrate, or blend) at the manufacturers recommended rates. Adjuvants that contain some form of silicone can contribute to phytotoxicity. **Restrictions:**

- Do not apply more than 43.2 fl oz/A of **HELMSTAR PLUS SC** per year.
- Do not apply more than 0.9 lb. a.i. tebuconazole-containing products/A/year.
- Do not apply more than 1.5 lbs. a.i. azoxystrobin-containing products/A/year.
- Do not apply within 35 days of harvest (35-day PHI).
- Restricted-entry interval (REI) = 12 hours.
