Premise® 2 Insecticide

EPA Reg. No. 432-1331

For control of occasional/fall invader species on outside/perimeter pests

PRODUCT BULLETIN

FOR DISTRIBUTION AND USE ONLY IN THE STATES OF CONNECTICUT,
DISTRICT OF COLUMBIA, DELAWARE, ILLINOIS, INDIANA, IOWA, KANSAS,
MAINE, MARYLAND, MASSACHUSETTS, MICHIGAN, MINNESOTA, MISSOURI,
NEW JERSEY, OHIO, PENNSYLVANIA, RHODE ISLAND, VERMONT AND
WISCONSIN

FIFRA Section 2(ee) Recommendation: This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA. It is a violation of federal law to use this product in a manner inconsistent with its label. This product bulletin should be in the possession of the user at the time of application of the product. All applicable directions, restrictions and precautions on the EPA registered label are to be followed.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its label.

APPLICATION FOR OCCASIONAL/FALL INVADER SPECIES FOR OUTSIDE/PERIMETER PESTS Occasional/fall invaders including multi-colored Asian lady beetle, elm leaf beetle, boxelder bug, cluster flies, brown marmorated stink bug and globular stink bug (kudzu bug).

Begin treatments when pests are noticed in late summer or fall, just before these pests begin migrating to winter shelter. Apply low pressure (do not exceed 50 psi at nozzle tip) mist or spray to exterior surfaces of buildings, porches, patios, garages, fences, and other surfaces where these pests are congregated or may enter the structure. Spray siding, eaves, around windows and doors, and window screens. Applications may be made as a general surface, spot or crack and crevice treatment.

Apply directly to insects that have congregated around doors, windows and similar areas where they may enter the structure. To help reduce infestations, treat cracks and crevices, attics and other winter hiding places located inside buildings.

Treatment of trees and shrubs infested with boxelder bugs, elm leaf beetles, stink bugs or other occasional invading species early in the season may further reduce the source of structural infestation. [Tree spraying may require ornamental license - check with your local regulator.]

High volume applications using power sprayers: You must adjust the rate of product dilution to ensure that 0.27 fl. oz. (8 ml) of this product is applied per 1,000 square feet of treated surface. For example, mixing 4.5 fluid ounces of this product in a 50 gallon tank, while using an application volume of 3.0 gallons per 1,000 square feet, will apply 0.27 fluid ounces of this product per 1,000 square feet. The table below gives examples of end use dilutions for typical power spraying application volumes.

DILUTION RATE CHART			
Amount of Product fluid ounces (milliliter)		Application Volume gallons water	Concentration (% AI) in spray solution
0.27	(8)	1	0.05%
		2	0.025%
		3	0.017%
		4	0.013%
		5	0.01%

Treatments may be applied at monthly intervals to maintain control.
